Search Notes

Published Applications Database - November 2005

Published_Applications Nucleic Acid and Published_Applications Amino Acid database searches now generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published_Applications_New databases; older published applications make up the Published_Applications_Main databases.

Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions **.rnpbm** (Published_Applications_NA_Main) and **.rnpbn** (Published_Applications_NA_New).
Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions **.rapbm** (Published_Applications_AA_Main) and **.rapbn** (Published_Applications_AA_New).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

            ---------- Summary Statistics
                Center project name: H_NH0441M04
            ----------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-549J11; the clone sequenced
            to the right is RP11-257N21, 200 bp overlap.  Actual start of this
            clone is at base position 1 of RP11-441M4; actual end is at base
            position 40609 of RP11-257N21.

  TITLE     Direct Submission
  JOURNAL   Submitted (19-FEB-2003) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Feb 20, 2003 this sequence version replaced gi:27902020.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to confirm this sequence.  Sequence data
            from the whole genome shotgun alone has only been used where it has
            a phred quality of at least 30.
            ---------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            ----------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-441D24 is
            from the RPCI-23 Mouse BAC Library
            constructed by the group of Pieter de Jong.

TITLE Direct Submission
JOURNAL Submitted (20-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Nov 20, 2002 this sequence version replaced gi:23913725.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:25009237.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

COMMENT     On Nov 20, 2002 this sequence version replaced gi:22856683.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:23264460.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

COMMENT     On Nov 2, 2000 this sequence version replaced gi:11024897.
            Address all correspondence to:at@tigr.org

            BAC clone T18C15 is from Arabidopsis thaliana chromosome 1
            The orientation of the sequence is from SP6 to T7 end of the BAC
            clone.
            Genes were identified by a combination of several methods: Gene
            prediction programs including Genscan+ (Chris Burge,
            http://CCR-081.mit.edu/GENSCAN.html), GeneMarkHMM (Mark Borodovsky,
            http://genemark.biology.gatech.edu/GeneMark/), GlimmerA (a variant
            of GlimmerM, see Mihaela Pertea,
            http://www.tigr.org/softlab/glimmerm_htm/glimmerm.html, and
            GeneSplicer (Mihaela Pertea and Steven Salzberg, contact
            mpertea@tigr.org), searches of the complete sequence against a
            peptide database and the plant EST database at TIGR
            (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to
            indicate the level of evidence for their annotation. Genes with
            similarity to other proteins are named after the database hits.
            Genes without significant peptide similarity but with EST
            similarity are named as  unknown  proteins. Genes without protein
            or EST similarity, that are predicted by more than two gene
            prediction programs over most of their length are annotated as
            hypothetical  proteins. Genes encoding tRNAs are predicted by
            tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/).
            Simple repeats are identified by repeatmasker (Arian Smit,
```

```
          http://ftp.genome.washington.edu/RM/RepeatMasker.html).

  TITLE     Direct Submission
  JOURNAL   Submitted (12-OCT-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Oct 12, 2002 this sequence version replaced gi:22538509.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM

                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: KARJ
                Center clone name: CH230-376M13
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 174170 bases at least Q40
                Consensus quality: 176032 bases at least Q30
                Consensus quality: 177089 bases at least Q20
                Estimated insert size: 178148; sum-of-contigs estimation
                Quality coverage: 9x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   191712: contig of 191712 bp in length.

            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New type-1 ribosome-inactivating protein bouganin - useful in forming
PT immunotoxins for use in medicine and plant protection.
XX
PS Example 8; Page 22; 39pp; English.
XX
CC This sequence encodes a fragment of the ribosome-inactivating protein
CC (RIP) of the invention. The RIP is designated bouganin, and comprises a
CC linear polypeptide (26 kDa) with a pI of 9.0, where the amino-terminal
CC end exhibits 50 % homology with the sequence shown in AAW67752. The
CC proteins and conjugates form compositions in treating various human
CC diseases or conditions, including cancer, graft-versus-host disease,
CC organ transplant rejection, type I diabetes, multiple sclerosis,
CC rheumatoid arthritis, systemic lupus erythematosus, and myasthenia
CC gravis. The proteins are also useful as therapeutic anti-viral agents in
CC plants and mammals. Compositions containing the polynucleotide encoding
CC bouganin are useful in gene therapy. Bouganin possesses low non-specific
CC toxicity, which makes it very suitable for use as the toxic agent in
CC various immunotoxins. (Updated on 27-AUG-2003 to correct OS field.)

XX
CC   Total cellular mRNA from leaves of P. americana was used to produce a
CC   cDNA library and this screened with anti-PAP antibody raised in rabbits
CC   against purified PAP. Inserts were isolated from 2 clones and sequenced
CC   to identify a 1195 ORF (AAQ81457) that encodes a 313 AA PAP including a
CC   22 AA signal peptide. The mature PAP gene was sugjected to PCR
CC   amplification using primers AAQ81458 and AAQ81459. The amplification
CC   product was cut with Hind III and inserted into the commercial FLAG (RTM)
CC   vector cut with the same enzyme to form pMJ12. pMJ12 is deposited with
CC   the Korean Collection of Culture and Microorganism (KCCM), an
CC   International Depository Authoritory, on June 30 1993, ad deposition No.
CC   KCCM 10037, and claimed. (Updated on 16-OCT-2003 to standardise OS field)

PT   Novel modified pokeweed antiviral protein useful for inhibiting viral
PT   replication, for inducing depurination of viral RNA, or for treating
PT   viral infection in subject.
XX
PS   Example 2; SEQ ID NO 1; 62pp; English.
XX
CC   This invention relates to novel modified pokeweed antiviral proteins
CC   (PAPs). Specifically, it refers to modifications relative to wild-type
CC   PAP that confer increased activity towards viral RNA, particularly
CC   retroviral RNA such as HIV-1 and drug resistant HIV-1. Furthermore,
CC   modified PAP also exhibits decreased activity towards ribosomal RNA
CC   relative to wild-type PAP. The present invention describes a molecular
CC   model of PAP-HIV RNA interactions that have been used for the rational
CC   redesign of PAP mutants with potent anti-HIV activity, where
CC   modifications have been introduced in regions other than the active site.
CC   Accordingly, these mutants represent antiviral agents that can work as
CC   nucleoside analogue inhibitors of reverse transcriptase, as well as viral
CC   protease inhibitors that can be used for treating viral infections. As
CC   such, they are useful for inhibiting viral replication and for
CC   depurinating viral RNA. This polynucleotide sequence is the DNA encoding
CC   the wild type american pokeweed antiviral protein (PAP) of the invention.

PT   New antiviral DNA useful for generating transgenic plants resistant to
PT   viruses and/or fungi.
XX
PS   Example; Page 4-5; 43pp; English.
XX
CC   This is the Pokeweed antiviral protein (PAP) nucleotide sequence. PAP is
CC   a type I ribosome-inhibiting protein (RIP) found in the cell walls of
CC   Phytolacca americana (pokeweed). It is a single polypeptide chain that
CC   catalytically removes a specific adenine residue from a highly conserved
CC   stem-loop structure in the 28S rRNA of eukaryotic ribosomes. The pokeweed
CC   antiviral protein II (PAP II) protein confers antiviral and or antifungal
CC   activities to plants. A DNA molecule encoding a PAP II protein with an
CC   intact catalytic active site amino acid residue (E172) is useful for
CC   generating transgenic plants. PAP II DNA is useful for generating
CC   transgenic plants (especially cereal crops) through transforming a
CC   protoplast or introducing the DNA directly into a plant part prior to
CC   regeneration. Cells and seeds which exhibit anti-viral and/or anti-fungal
CC   activity thus have increased resistance to viruses and/or fungi. Viruses
CC   include potato virus X (PVX), cucumber mosaic virus (CMV), and tomato
CC   yellow leaf curl virus, and fungi include Pythium, Phytophthora,
CC   Scleropora and Aspergillus. PAP II proteins also confer resistance to
CC   other plants pests including insects, bacteria and nematodes. PAP II DNA
CC   is also useful for identifying a PAP II protein having reduced
CC   cytotoxicity. PAP II has a reduced cytotoxicity compared to PAP, so
CC   unlike PAP transgenic plants which are stunted and sterile, PAP II
CC   transgenic plants have a normal and fertile phenotype

PS   Disclosure; Col 47-50; 32pp; English.
XX
CC   The present invention describes a fusion protein or an immunoconjugate
CC   (I), comprising mutant Pokeweed Anti-viral Protein (PAP) having an amino
CC   acid substitution at residue 75, 97 or 176 of native PAP and a targeting
CC   moiety that binds a cell surface receptor. (I) can have cytostatic and
CC   anti-HIV activities, and is an inhibitor of cellular RNA or protein
CC   synthesis. (I) is useful for treating AIDS and cancers including
CC   leukaemia, lymphoma, a brain tumour, neuroblastoma, osteosarcoma, soft
CC   tissue sarcoma, breast, prostate, ovarian, testicular, melanoma, lung, or
CC   colon cancer. Immunoconjugates prepared using PAP mutants exhibit an
CC   improved therapeutic index over immunoconjugates containing either wild-
CC   type PAP or variant PAP. The present sequence encodes the wild-type PAP,
CC   which is given in the exemplification of the present invention

PT   Inducing necrotic effect in specific cells of plant by transforming plant
PT   with a chimeric gene encoding pokeweed antiviral protein and a promoter
PT   which acts in response to application of specific stimulus to plant.
XX
PS   Claim 5; Page 86; 87pp; English.
XX
CC   The invention relates to a method of inducing a necrotic effect in
CC   specific cells of a plant. The method involves transforming the plant
CC   with chimeric gene(s) which encodes a pokeweed antiviral protein namely
CC   PAP', PAPII and PAP-S, where the gene(s) comprises a promoter which acts
CC   in response to the application of a specific stimulus to the plant so as
CC   to facilitate expression of the pokeweed antiviral protein in specific
CC   cells of the plant. The method is useful for inducing a necrotic effect
CC   in specific cells of a plant. The present sequence is pokeweed PAP' DNA

PT   New Pokeweed Antiviral Protein (PAP) mutant that is less toxic than wild-
PT   type PAP, useful in agricultural biotechnology or in the fields of
PT   pharmaceutics and medicine, e.g. treating cancer, AIDS, viral infection
PT   or autoimmune disease.
XX
PS   Disclosure; SEQ ID NO 1; 51pp; English.
XX
CC   The invention relates to a novel Pokeweed Antiviral Protein (PAP) mutant
CC   that is less toxic than wild-type PAP and exhibits ribosome depurination
CC   activity, where the mutant is a central domain mutant or N-terminal
CC   domain mutant. The PAP mutants have the following activities: antifungal,
CC   antiviral, virucide, anti-HIV, cytostatic and immunosuppressive. The PAP
CC   mutants are useful in agricultural biotechnology as well as in the fields
CC   of pharmaceutics and medicine. The PAP mutants and methods are useful in
CC   treating mammals with cancer, AIDS, viral infection or autoimmune
CC   diseases associated with proliferations of unwanted T-cells or B-cells.
CC   The transgenic plants are useful in exhibiting resistance to a broad
CC   spectrum of plant pests e.g. viruses and fungi. This polynucleotide
CC   sequence represents the DNA encoding the wild-type pokeweed antiviral
CC   protein of the invention.

PT   New isolated nucleic acid derived from Enterococcus faecium encoding an
PT   Enterococcus faecium polypeptide useful for detection, prevention and
PT   treatment of a pathological condition resulting from a bacterial
PT   infection.
XX
PS   Example 1; SEQ ID NO 3648; 243pp; English.
XX
CC   The invention relates to an isolated nucleic acid derived from
CC   Enterococcus faecium encoding an Enterococcus faecium polypeptide having
CC   one of 10 fully defined sequences given in the (or comprising 40
CC   sequential nucleotides chosen from any of the nucleic acids, its
CC   complement or sequences hybridising to it). Also included are a
CC   recombinant vector comprising the nucleic acid operably linked to
CC   transcription regulatory element, a cell comprising the vector and a
CC   single-stranded probe comprising the nucleic acid. The nucleic acids are
CC   chosen from 3654 disclosed sequences encoding 3654 disclosed proteins.
CC   The nucleic acids is useful for diagnosing pathological conditions
CC   resulting from E. faecium bacterial infection (e.g. urinary tract
CC   infection, bacteraemia, endocarditis, wounds and abdominal-pelvic
CC   infection) and for screening drugs such as agonists and antagonists. The
CC   nucleic acid is useful for recombinant production of Candida albicans -
CC   derived peptides or antisense polypeptides. Pharmaceutical compositions
CC   and vaccines containing the nucleic acid are useful for preventing or
CC   treating Enterococcus faecium infections. The present sequence represents
CC   one if the disclosed E. faecium nucleic acids.

PT   Inducing necrotic effect in specific cells of plant by transforming plant
PT   with a chimeric gene encoding pokeweed antiviral protein and a promoter
PT   which acts in response to application of specific stimulus to plant.
XX
PS   Claim 3; Page 77; 87pp; English.
XX
CC   The invention relates to a method of inducing a necrotic effect in
CC   specific cells of a plant. The method involves transforming the plant
CC   with chimeric gene(s) which encodes a pokeweed antiviral protein namely
CC   PAP', PAPII and PAP-S, where the gene(s) comprises a promoter which acts
CC   in response to the application of a specific stimulus to the plant so as
CC   to facilitate expression of the pokeweed antiviral protein in specific
CC   cells of the plant. The method is useful for inducing a necrotic effect
CC   in specific cells of a plant. The present sequence is pokeweed PAP-Salpha
CC   protein encoding DNA

PT   Antiviral proteins of Phytolacca insularis Nakai and their genes - useful
PT   in plant antiviral agents and immunoconjugates for the treatment of AIDS
PT   and cancer.
XX
PS   Claim 2; Page 10-12; 26pp; English.
XX
CC   This polynucleotide comprises the coding region of the Phytolacca
CC   insularis Nakai gene coding for a 32.8 kDa novel antiviral protein
```

```
CC   designated gPIP2 (see AAW26773). The gPIP2 gene was isolated from leaf
CC   genomic DNA by PCR amplification (see AAT99558-59). Another gene (see
CC   AAT99557), encoding a 35.7 kDa protein (see AAW26774) designated gPIP50,
CC   has also been isolated from P. insularis Nakai. Also claimed are vectors
CC   encoding these antiviral proteins and host cells transformed or
CC   transfected with these vectors. E. coli XL1-Blue MRF' gPIP2 (KCCM-10080)
CC   host cells are claimed, as is a process for preparing antiviral protein
CC   by cultivating these cells and purifying the protein from inclusion
CC   bodies. The antiviral proteins and recombinant proteins inhibit protein
CC   synthesis. They can be used as active ingredients of antiviral agents of
CC   plant viruses, and employed in the manufacture of immunoconjugates for
CC   the treatment of AIDS and cancer. The isolated genes can be used in the
CC   breeding of transgenic plants having viral resistance. (Updated on 17-OCT
CC   -2003 to standardise OS field)

PT   Inducing necrotic effect in specific cells of plant by transforming plant
PT   with a chimeric gene encoding pokeweed antiviral protein and a promoter
PT   which acts in response to application of specific stimulus to plant.
XX
PS   Disclosure; Page 83; 87pp; English.
XX
CC   The invention relates to a method of inducing a necrotic effect in
CC   specific cells of a plant. The method involves transforming the plant
CC   with chimeric gene(s) which encodes a pokeweed antiviral protein namely
CC   PAP', PAPII and PAP-S, where the gene(s) comprises a promoter which acts
CC   in response to the application of a specific stimulus to the plant so as
CC   to facilitate expression of the pokeweed antiviral protein in specific
CC   cells of the plant. The method is useful for inducing a necrotic effect
CC   in specific cells of a plant. The present sequence is a fusion DNA. This
CC   sequence comprises pokeweed pro-PAP-S DNA, rice cystatin delta D86 DNA
CC   and Tobacco Etch virus (TEV) NIa protease cleavage site (PCS). (Updated
CC   on 29-AUG-2003 to standardise OS field)

PT   New recombinant DNA construct, useful for improving plant tolerance to
PT   cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT   pests, for conferring increased resistance to plant disease, or for
PT   improving yield.
XX
PS   Claim 1; SEQ ID NO 31620; 15pp; English.
XX
CC   The invention describes a recombinant DNA construct comprising a
CC   polynucleotide consisting of a sequence encoding an amino acid sequence
CC   available in electronic form from the US patent office at
CC   ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
CC   of the invention are also useful in physical arrays of molecules and as
CC   plant breeding markers. The recombinant DNA construct is useful for
CC   improving plant tolerance to cold, heat, drought, herbicides, extreme
CC   osmotic conditions, pathogens or pests, for manipulating growth rate in
CC   plant cells by modification of the cell cycle pathway, for conferring
CC   increased resistance to plant disease, for producing galactomannan,
CC   lignin or plant growth regulators, for increasing the rate of homologous
CC   recombination in plants, for improving yield by modification of
CC   photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC   or by providing improved plant growth and development under at least one
CC   stress condition or for modifying seed oil or protein yield and/or
CC   content. This sequence represents a plant full length insert
CC   polynucleotide that can be used in the recombinant DNA construct of the
CC   invention.

PT   Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.
XX
PS   Claim 1; SEQ ID NO 4460; 2449pp; English.
XX
CC   The invention relates to 2495 novel polynucleotides (I) and their encoded
CC   polypeptides, sequences hybridizing to these nucleotides, sequences
CC   encoding partial polypeptides and sequences having 70% or 90% identity to
CC   the nucleotide and protein sequences. The nucleotides and polypeptides
CC   are useful as diagnostic markers or therapeutic target for the diseases
CC   or morbid states. They are also useful for treating osteoporosis,
CC   neurological diseases, Alzheimer's diseases, Parkinson's diseases,
CC   dementia and various cancers. This sequence corresponds to a nucleotide
CC   sequence of the invention.

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 18022; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New human transporters and ion channels polypeptides and polynucleotides
PT   for diagnosing, preventing or treating transport, neurological, muscle,
PT   immunological and cell proliferative disorders.
XX
PS   Claim 78; Page 205; 230pp; English.
XX
CC   The invention relates to human transporter and ion channel polypeptides
CC   designated TRICH and nucleic acid molecules encoding such polypeptides.
CC   TRICH sequences are useful for diagnosis, treatment and prevention of
CC   transport, muscle, neurological, immunological and cell proliferative
CC   disorders. Transport disorders include akinesia, amyotrophic lateral
CC   sclerosis, ataxia telangiectasia, cystic fibrosis, Becker's muscular
CC   dystrophy, diabetes mellitus, diabetes insipidus, myasthenia gravis,
CC   myocarditis, prostate cancer, cardiac disorders associated with transport
CC   e.g. polymyositis, bradyarrythmia, dermatomyositis, angina, neurological
CC   disorders associated with transport e.g. amnesia, bipolar disorder,
CC   depression, Tourette's disorder, schizophrenia, other disorders
CC   associated with transport e.g. neurofibromatosis, sickle cell anaemia,
CC   Wilson's disease, cataracts, infertility, hyperglycaemia, hypoglycaemia,
CC   goitre, Cushing's disease, hypercholesterolaemia and cystinuria. Cell
CC   proliferated disorders include cancer, actinic keratosis, cirrhosis,
CC   arteriosclerosis, atherosclerosis, bursitis, hepatitis and psoriasis.
CC   Neurological disorders include Alzheimer's, Pick's and Parkinson's
CC   disease, amyotrophic lateral sclerosis, epilepsy, stroke, Huntington's
CC   disease, multiple sclerosis, dementia and other extrapyramidal disorder,
CC   motor neuron disorder, prion disease, metabolic disease of the nervous
CC   system and other developmental disorders of the central nervous system,
CC   neuromuscular disorders, metabolic, endocrine and toxic myopathies,
CC   periodic paralysis, mental disorders including mood, anxiety; and

XX
PS   Claim 31; Fig 14; 144pp; English.
XX
CC   The invention provides Leporipox virus immunomodulatory polypeptides
CC   (AAB61845-864) and nucleic acid molecules (AAC84968-987) encoding these
CC   polypeptides. The immunomodulatory polypeptides and its modulators are
CC   useful for treating immunomodulatory disorder and for immunomodulation in
CC   mammals with conditions such as acute inflammation, rheumatoid arthritis,
CC   transplant rejection, restenosis, (bronchial) asthma, allergies, uveitis,
CC   inflammatory bowel disease, psoriasis, atopic dermatitis, pollinosis,
CC   systemic lupus erythematosus, nephrotic syndrome lupus, multiple
CC   sclerosis, myasthenia gravis, diabetes mellitus, glomerulonephritis,
CC   Hashimoto's thyroiditis, autoimmune haemolytic anemia, autoimmune
CC   thrombocytopenic purpura, malignancy and metastasis, microbial infection,
CC   autoimmune disease, cirrhosis, endotoxemia, atherosclerosis, reperfusion
CC   injury and inflammatory responses, AIDS, liver cirrhosis, ischaemic
CC   injury, neurodegeneration and myelodysplastic syndrome. Vectors
CC   comprising the encoding nucleic acids are useful for treating the above
CC   mentioned diseases by gene therapy. The present sequence represents the
CC   cDNA encoding the immunomodulatory polypeptide M144

PT   New ribosome inactivating protein bryodin-2 and related conjugates - for
PT   killing target cells, e.g. in treatment of cancer, also related nucleic
PT   acid, vectors and transformed cells.
XX
PS   Claim 21; Page 54-55; 81pp; English.
XX
CC   The sequence encodes the ribosome inactivating protein termed bryodin-2,
CC   isolated from Bryonia dioica. Conjugates of the protein with a ligand may
CC   be used to kill target cells (i.e. those to which the ligand component
CC   binds specifically) or to inhibit proliferation of tumour cells. Typical
CC   applications include the treatment of cancer, viral infections, malaria,
CC   trypanosomiasis, inflammatory or autoimmune diseases, including in vitro
CC   purging of e.g. bone marrow. (Updated on 25-MAR-2003 to correct PN
CC   field.)

PT   New isolated nucleic acid detection reagent for detecting 1000 or more
PT   genes from Drosophila and for elucidating cell signaling and cell-cell
PT   interactions.
XX
PS   Claim 1; SEQ ID NO 37240; 21pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated nucleic acid detection reagent
CC   capable of detecting 1000 or more genes from Drosophila. The invention is
CC   useful in developmental biology and in elucidating cell signalling and
CC   cell-cell interactions in higher eukaryotes for the development of
CC   insecticides, therapeutics and pharmaceutical drugs. The invention
CC   discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC   sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC   ABB72072). The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   New isolated nucleic acid detection reagent for detecting 1000 or more
PT   genes from Drosophila and for elucidating cell signaling and cell-cell
PT   interactions.
XX
PS   Claim 1; SEQ ID NO 37237; 21pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated nucleic acid detection reagent
CC   capable of detecting 1000 or more genes from Drosophila. The invention is
CC   useful in developmental biology and in elucidating cell signalling and
CC   cell-cell interactions in higher eukaryotes for the development of
CC   insecticides, therapeutics and pharmaceutical drugs. The invention
CC   discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC   sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC   ABB72072). The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Novel isolated polypeptide associated with breast cancer, useful for
PT   detecting presence of polypeptide in sample, as a marker for breast
PT   cancer.
XX
PS   Disclosure; SEQ ID NO 11177; 36pp; English.
XX
CC   The invention relates to an isolated polypeptide (I) associated with
CC   breast cancer which is encoded by a nucleic acid molecule comprising a
CC   nucleotide sequence (S1). Further disclosed is an antibody that binds to
CC   the polypeptide of the invention. The activity of the polypeptide of the
CC   invention may be described as cytostatic. The antibody is useful for
CC   detecting the presence of (I) in a sample. Nucleic acid molecules of the
CC   invention are useful in the detection of breast tumours. (I) is useful as
CC   a marker for breast cancer and in breast cancer therapy. Sequences given
CC   in records ACN78851-ACN92934 represent nucleic acid markers associated
CC   with breast cancer. Note: The sequence listing does not form part of the
CC   specification but may be obtained in electronic format from the USPTO web
CC   site at seqdata.uspto.gov/sequence.html?DocID=20030099974

PT   New Piromyces rhizinflata enzyme (cbhA) useful for hydrolyzing cellulose.
XX
PS   Claim 6; Col 3-6; 10pp; English.
XX
CC   The invention discloses an isolated Piromyces rhizinflata nucleic acid
CC   encoding a cellulase polypeptide, CBHA, that hydrolyses a polysaccharide
CC   containing a beta-1,3' or beta-1,4' glycosidic linkage. The enzyme is
CC   useful for breaking down biomass in industrial applications e.g. for
CC   hydrolysing cellulose for use in alcoholic fermentation (for converting
CC   indigestible biomass into fermentable sugars), animal feeds (for
CC   decreasing the production of faecal waste by increasing the digestibility
CC   of the feed) and for producing stone-washed blue jeans. The sequence
CC   presented is the P. rhizinflata cellulase, cbhA, cDNA. (Updated on 27-OCT
CC   -2003 to standardise OS field)

PT   New nucleic acid molecule that encodes a chimeric polypeptide comprises a
PT   first part and a second part that encodes a heterologous polypeptide,
PT   useful for treating viral, bacterial, fungal, or parasitic infections, or
PT   cancer.
XX
PS   Disclosure; Page 79-80; 95pp; English.
XX
CC   The invention relates to a nucleic acid molecule that encodes a chimeric
CC   polypeptide comprising a first part and a second part that encodes a
CC   heterologous polypeptide. The invention also relates to a chimeric
CC   polypeptide encoded by the nucleic acid, a vector comprising the nucleic
CC   acid, a cell transfected or transformed with the nucleic acid or the
CC   vector, a method of producing the chimeric polypeptide, a plant
CC   comprising the cell, a seed comprising the cell, a vessel comprising the
CC   cell and/or the polypeptide, a vaccine preparation comprising the cell, a
CC   fraction of the cell or the plant, a method of immunizing an animal to at
CC   least the second part of the chimeric polypeptide, an antibody obtainable
CC   by the method, a method for preparing a hybridoma cell-line producing
CC   monoclonal antibodies and a method for preparing the vaccine preparation.
CC   The method of producing the chimeric polypeptide comprises providing cell
CC   and growth conditions conducive to the production of a chimeric
CC   polypeptide and optionally purifying the chimeric polypeptide from the
CC   cell or growth media. The method of immunizing an animal to at least the
CC   second part of the chimeric polypeptide comprises administering an amount
CC   of the chimeric polypeptide or preparation to stimulate an immune
CC   response to the second part. The method of preparing a hybridoma cell-
CC   line producing monoclonal antibodies comprises immunizing an
CC   immunocompetent mammal with a chimeric polypeptide or preparation, fusing
CC   lymphocytes of the immunized immunocompetent mammal with myeloma cells to
CC   form hybridoma cells, screening monoclonal antibodies produced by the
CC   hybridoma cells for binding activity to the polypeptide, culturing the
CC   hybridoma cells to proliferate and/or to secrete the monoclonal antibody
CC   and recovering the monoclonal antibody from the culture supernatant. The
CC   method of preparing the vaccine preparation comprises forming a cell
```

```
CC   extract from a plant cell culture or plant and separating the extract
CC   into an oil body rich fraction. The extract is incubated with a protease
CC   that cleaves the second part from the first part. The nucleic acid,
CC   polypeptide, antibody, and vaccine are useful for treating viral,
CC   bacterial, fungal and parasitic infections and cancer. This sequence
CC   represents GTase cDNA used in the scope of the invention.

PT   New recombinant DNA construct, useful for improving plant tolerance to
PT   cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT   pests, for conferring increased resistance to plant disease, or for
PT   improving yield.
XX
PS   Claim 1; SEQ ID NO 25526; 15pp; English.
XX
CC   The invention describes a recombinant DNA construct comprising a
CC   polynucleotide consisting of a sequence encoding an amino acid sequence
CC   available in electronic form from the US patent office at
CC   ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
CC   of the invention are also useful in physical arrays of molecules and as
CC   plant breeding markers. The recombinant DNA construct is useful for
CC   improving plant tolerance to cold, heat, drought, herbicides, extreme
CC   osmotic conditions, pathogens or pests, for manipulating growth rate in
CC   plant cells by modification of the cell cycle pathway, for conferring
CC   increased resistance to plant disease, for producing galactomannan,
CC   lignin or plant growth regulators, for increasing the rate of homologous
CC   recombination in plants, for improving yield by modification of
CC   photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC   or by providing improved plant growth and development under at least one
CC   stress condition or for modifying seed oil or protein yield and/or
CC   content. This sequence represents a plant full length insert
CC   polynucleotide that can be used in the recombinant DNA construct of the
CC   invention.

PT   New recombinant DNA construct, useful for improving plant tolerance to
PT   cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT   pests, for conferring increased resistance to plant disease, or for
PT   improving yield.
XX
PS   Claim 1; SEQ ID NO 17777; 15pp; English.
XX
CC   The invention describes a recombinant DNA construct comprising a
CC   polynucleotide consisting of a sequence encoding an amino acid sequence
CC   available in electronic form from the US patent office at
CC   ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
CC   of the invention are also useful in physical arrays of molecules and as
CC   plant breeding markers. The recombinant DNA construct is useful for
CC   improving plant tolerance to cold, heat, drought, herbicides, extreme
CC   osmotic conditions, pathogens or pests, for manipulating growth rate in
CC   plant cells by modification of the cell cycle pathway, for conferring
CC   increased resistance to plant disease, for producing galactomannan,
CC   lignin or plant growth regulators, for increasing the rate of homologous
CC   recombination in plants, for improving yield by modification of
CC   photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC   or by providing improved plant growth and development under at least one
CC   stress condition or for modifying seed oil or protein yield and/or
CC   content. This sequence represents a plant full length insert
CC   polynucleotide that can be used in the recombinant DNA construct of the
CC   invention.

PT   New substantially purified Myxococcus xanthus nucleic acid molecule
PT   encoding a nitrite reductase, useful for determining gene expression,
PT   identifying mutations in a gene of interest, and for constructing
PT   mutations in a gene of interest.
XX
PS   Example 1; SEQ ID NO 1150; 25pp; English.
XX
CC   The invention relates to a substantially purified nucleic acid molecule
CC   encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a
CC   recombinant DNA construct for expression of a nitrite reductase gene in a
CC   plant cell, and a plant cell comprising the recombinant DNA construct.
CC   The nucleic acid is useful for determining gene expression, identifying
CC   mutations in a gene of interest, and for constructing mutations in a gene
CC   of interest. Sequences given in records for SEQ IDs 1-1849 represent a
CC   set of 1849 contig and singleton sequences comprising coding sequences,
CC   DNA replication elements, promoters and other regulatory elements from
CC   the genome of the bacterium Mxyococcus xanthus. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from USPTO

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Vector: pSPORT1 (Invitrogen); Site_1: SalI; Site_2: NotI; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were obtained from Dr. Kenneth R. Boheler (National Institute on Aging, USA). ES cells were cultured without feeder cells in the absence of LIF for 4 hours or 18 hours. Equimolar mixture of these RNA samples was used for the library construction. Double-stranded cDNAs were synthesized with an Oligo(dT) primer [Invitrogen: 5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCCTTTTTTTTTTTTTTT-3'] from 21 ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pSPORT1 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.4 kb. The library was constructed by Yulan Piao (NIA)."

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                     /note="Vector: pCMV-SPORT 6.1; Site_1: EcoRV; Site_2:
                     NotI; Maize Full length cDNA library (3530 library)
                     created by Invitrogen from multiple tissues; Organ: silks,
                     husks, ears, pollen, shoot tips, leaf, root tips, whole
                     seed, embryo. This is a Gateway compatible vector,
                     permitting clone movement to new vector backbones for
                     expression in diverse host cells using recombination
                     rather than restriction enzymes. poly(A)+ mRNA was
                     prepared by Invitrogen, and equimolar amounts of RNA from
                     each of the 12 tissue samples were mixed together for
                     selection of mRNA with a 5' cap. After synthesis of cDNA,
                     a normalization step was conducted against the mixture of
                     RNA sources. Tissues prepared: 1. just emerging silks; 2.
                     inner husks from ears of sample #1; 3. 20 dap aleurone; 4.
                     immature tassels, stages from 1-2 mm to 1-2 cm; 5. 2 mm to
                     2 cm ears; 6. pollen; 7. 1 cm vegetative shoot tips from
                     15 day old seedlings; all leaves with an expanded or
                     partially expanded sheath were removed; 8. mature leaf
                     tissue; 9. 0.5 cm long root tips from 15 day old
                     seedlings; 10. 10 dap whole seed; 11. 12 dap endosperm and
                     embryo; 12. 17 dap endosperm and embryo. All of the
                     sequenced clones in Maize Full-length cDNA Project will be
                     archived at the University of Arizona. Clones, high
                     density filters and amplified library can be ordered from
                     the University of Arizona
                     (http://www.genome.arizona.edu/orders/)."

---------- Summary Statistics
Center project name: H_RG104I04
----------.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7 or mailto:egreen@nhgri.nih.gov

SOURCE INFORMATION:
Clone CTB-104I4 is from the first release of the human BAC library CITB-978SK-B. The library contains cloned DNA from the male fibroblast cell line 978SK. See: Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1996). This clone is available from Research Genetics, Inc. (http://www.resgen.com).
VECTOR: pBeloBAC11
Selection: chloramphenicol

NEIGHBORING SEQUENCE INFORMATION:
The actual start of this clone is at base position 1 of CTB-104I4 actual end is at 191191 of CTB-104I4. The orientation of this clone is unknown.

            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 30 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2466: contig of 2466 bp in length
            *                   gap of unknown length
            *     2467     5597: contig of 3131 bp in length
            *                   gap of unknown length
            *     5598     7794: contig of 2197 bp in length
            *                   gap of unknown length
            *     7795    10770: contig of 2976 bp in length

            worm@sanger.ac.uk
COMMENT     Coding sequences below are predicted from computer analysis, using
            predictions from Genefinder (P. Green, U. Washington), and other
            available information.
            Current sequence finishing criteria for the C. elegans genome
            sequencing consortium are that all bases are either sequenced
            unambiguously on both strands, or on a single strand with both a
            dye primer and dye terminator reaction, from distinct subclones.
            Exceptions are indicated by an explicit note.
            IMPORTANT:  This sequence is NOT necessarily the entire insert of
            the specified clone.  It may be shorter because we only sequence
            overlapping sections once, or longer because we arrange for a small
            overlap between neighbouring submissions.
            For a graphical representation of this sequence and its analysis
            see:- http://www.wormbase.org/perl/ace/elegans/seq/sequence?
            name=C08H9;class=Sequence
            IMPORTANT: This sequence is not the entire insert of clone C08H9.
            It may be shorter because we only sequence overlapping sections
            once, or longer because we arrange for a small overlap between
            neighbouring submissions.
            The true left end of clone C08H9 is at 1 in this sequence. The true
            right end of clone C08H9 is at 1052 in
            sequence Z47072.
            The true left end of clone F26C11 is at 42179 in this sequence. The
            true right end of clone ZK938 is at 17445 in this sequence. The
            start of this sequence (1. .101) overlaps with the end of sequence
            Z49913.
            The end of this sequence (42179. .42282) overlaps with the start of
            sequence Z47072.

    Center clone name: 142_O_2
--------------.
* NOTE: This record contains 60 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.
*        1      699: contig of 699 bp in length
*      700      799: gap of 100 bp

            Medical Center Dr, Rockville, MD 20850, USA, nelsayed@tigr.org
COMMENT     BAC clone RPCI93-29O4 from Trypanosoma brucei chromosome 8.
            Putative protein coding regions (>30 codons) were predicted by
            combining the output of the gene finding algorithm GLIMMER with
            similarity data and manual annotation of open reading frames.
            Further refinement of gene models (additions, deletions and
            alterations to boundary coordinates) were done manually based on
            detailed comparisons with the T. cruzi and L. major genomes. Genes
            on BACs were assigned a systematic name based on the chromosome and
            the BAC from which they originated (e.g. Tb03.27F10.410). Gene
            products were assigned a putative function when they shared
            significant similarity with experimentally characterized gene
            products or when they contained functionally known protein domains.
            Gene products were labelled either 'hypothetical protein', or
            'hypothetical protein, conserved' in the case of products showing
            significant similarity with proteins or domains of unknown function
            from other organisms. Gene products of unknown function with
            predicted orthologs in Trypanosoma cruzi and Leishmania major
            genomes were automatically classified as conserved proteins. Short
            predicted coding sequences (less than 150 codons) with no
            additional evidence of coding potential were labelled 'hypothetical
            protein, unlikely'.

            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jun 14, 2003 this sequence version replaced gi:30348844.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to confirm this sequence.  Sequence data
            from the whole genome shotgun alone has only been used where it has
            a phred quality of at least 30.
            -------------- Genome Center

            -------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-244N6 is
            from the RPCI-23 Mouse BAC Library
            constructed by the group of Pieter de Jong.

            Quality coverage:  2.1474836E7 in Q20 bases; null estimation
            Quality coverage:  30.25 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1     1000: contig of 1000 bp in length
            *    1001     1100: gap of unknown length
            *    1101     2353: contig of 1253 bp in length
            *    2354     2453: gap of unknown length
            *    2454   148008: contig of 145555 bp in length.

COMMENT     On Oct 22, 2002 this sequence version replaced gi:18376895.
            ------------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            ------------- Project Information
                 Center project name: coc
                 Center clone name: 591N22

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            ------------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 155508 bases at least Q40
                 Consensus quality: 155520 bases at least Q30
                 Consensus quality: 155528 bases at least Q20
                 Insert size: 149000; agarose-fp
                 Insert size: 155529; sum-of-contigs
                 Quality coverage: 11.64x in Q20 bases; agarose-fp
                 Quality coverage: 11.15x in Q20 bases; sum-of-contigs
            -------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *        1    26785: contig of 26785 bp in length
            *    26786    26885: gap of unknown length
            *    26886   155629: contig of 128744 bp in length.

LOCUS       AL135914               165802 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP1-56L9 on chromosome 6 Contains a
            novel gene, the SOD2 gene for superoxide dismutase 2,
            mitochondrial, a pseudogene similar to heterogenous nuclear
            ribonucleoprotein H, the gene for Wilms' tumor 1-associating
            protein (KIAA0105) (WTAP), the ACAT2 gene for acetyl-Coenzyme A
            acetyltransferase 2 (acetoacetyl Coenzyme A thiolase), the TCP1
            gene for t-complex 1 (CCT1, Ccta, D6S230E), the 5' end of the
            MRPL18 gene for mitochondrial ribosomal protein L18, and 4 CpG
            islands, complete sequence.

            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

COMMENT     On Jul 16, 2002 this sequence version replaced gi:21039975.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: M_BB0115O19
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-24 BAC Library has been constructed by Pieter de Jong and
            coworkers (http://www.chori.org) from male C57BL/6J mouse spleen
            and/or brain genomic DNA. The clone and detailed information can be
            obtained from Pieter de Jong and coworkers at http://www.chori.org

            NEIGHBORING SEQUENCE INFORMATION:
            This sequence is the entire insert of the clone.

  TITLE     Direct Submission
  JOURNAL   Submitted (14-OCT-1999) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On Mar 3, 2000 this sequence version replaced gi:6446867.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html

            -------------- Project Information
                Center project name: L3568
                Center clone name: 16_L_10
            --------------.
            * NOTE: This record contains 185 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *        1      916: contig of 916 bp in length
            *      917     1016: gap of 100 bp

            -------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
```

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-219K12 is
            from the RPCI-23 Mouse PAC Library
            constructed by the group of Pieter de Jong.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 13, 2002 this sequence version replaced gi:23307915.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: TUPV
                Center clone name: CH230-2B20
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 225288 bases at least Q40
                Consensus quality: 226863 bases at least Q30
                Consensus quality: 227872 bases at least Q20
                Estimated insert size: 232162; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   230706: contig of 230706 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT   On Nov 13, 2002 this sequence version replaced gi:23195704.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT New type-1 ribosome-inactivating protein bouganin - useful in forming
PT immunotoxins for use in medicine and plant protection.
XX
PS Example 8; Page 22; 39pp; English.
XX
CC This sequence encodes a fragment of the ribosome-inactivating protein
CC (RIP) of the invention. The RIP is designated bouganin, and comprises a
CC linear polypeptide (26 kDa) with a pI of 9.0, where the amino-terminal
CC end exhibits 50 % homology with the sequence shown in AAW67752. The
CC proteins and conjugates form compositions in treating various human
CC diseases or conditions, including cancer, graft-versus-host disease,
CC organ transplant rejection, type I diabetes, multiple sclerosis,
CC rheumatoid arthritis, systemic lupus erythematosus, and myasthenia
CC gravis. The proteins are also useful as therapeutic anti-viral agents in
CC plants and mammals. Compositions containing the polynucleotide encoding
CC bouganin are useful in gene therapy. Bouganin possesses low non-specific
CC toxicity, which makes it very suitable for use as the toxic agent in
CC various immunotoxins. (Updated on 27-AUG-2003 to correct OS field.)

PT   New type-1 ribosome-inactivating protein bouganin - useful in forming
PT   immunotoxins for use in medicine and plant protection.
XX
PS   Example 8; Page 24; 39pp; English.
XX
CC   This sequence represents a fragment of the DNA encoding the ribosome-
CC   inactivating protein (RIP) of the invention. The RIP is designated
CC   bouganin, and comprises a linear polypeptide (26 kDa) with a pI of 9.0,
CC   where the amino-terminal end exhibits 50 % homology with the sequence
CC   shown in AAW67752. The proteins and conjugates form compositions in
CC   treating various human diseases or conditions, including cancer, graft-
CC   versus-host disease, organ transplant rejection, type I diabetes,
CC   multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus,
CC   and myasthenia gravis. The proteins are also useful as therapeutic anti-
CC   viral agents in plants and mammals. Compositions containing the
CC   polynucleotide encoding bouganin are useful in gene therapy. Bouganin
CC   possesses low non-specific toxicity, which makes it very suitable for use
CC   as the toxic agent in various immunotoxins. (Updated on 27-AUG-2003 to
CC   correct OS field.)

PT   Analyzing proliferative diseases of breast cells, useful e.g. for
PT   diagnosis, prognosis and treatment of breast cancer, by determining
PT   methylation status of specific genes.
XX
PS   Claim 1; Page; 22pp; German.
XX
CC   This invention describes a novel method of analysing proliferative
CC   diseases of breast cells by determining the methylation status of certain
CC   genes. The invention also describes nucleic acids or their complements,
CC   oligomers, especially oligonucleotides or peptide nucleic acid oligomers,
CC   that hybridise to, or are identical with, any of the nucleic acids, the
```

CC preparation of an oligomer array for analysing proliferative diseases of
CC breast cells that are associated with the methylation status of CpG
CC dinucleotides of the genes by bonding at least one oligomer to a solid
CC phase and a kit comprising a bisulfite reagent and the oligomer. The
CC nucleic acids are genomic sequences (5'- and/or regulatory and/or CpG-
CC rich regions). The base sequence of the oligomer includes at least one
CC CpG island, especially with C in the middle third of the sequence. The
CC process involves a genomic DNA sample treated chemically, specifically
CC with a bisulfite reagent, to convert non-methylated C to uracil or some
CC other base having base-pairing properties different from those of C.
CC Fragments of the treated DNA are then amplified, using primers and a
CC polymerase and the methylation status of the genomic CpG dinucleotides is
CC determined by analysis of the amplicons, particularly by hybridisation to
CC the oligomer, optionally with extension of the hybridised oligomer by at
CC least one base, or detection is by sequencing. The amplification may use
CC methylation-specific primers. Alternatively, genomic DNA is extracted
CC from a sample and digested with methylation-specific restriction enzymes,
CC then the digestion fragments detected, optionally after amplification. In
CC either method, more than 10 fragments of 100-200 bp are amplified in a
CC single reaction vessel, using a heat-resistant DNA polymerase in PCR. The
CC amplicons carry detectable markers, e.g. fluorophores, radioisotopes
CC and/or releasable fragments of known mass that can be detected by mass
CC spectrometry. The method is used for characterisation, classification,
CC differentiation, staging, phase-estimation, diagnosis and/or therapy of
CC proliferative diseases of breast cells. The method provides very specific
CC classification of proliferative diseases, allowing better treatment. It
CC can both characterise methylation status and detect single-nucleotide
CC polymorphisms. This sequence represents human gene used to illustrate the
CC method of the invention. NOTE: This sequence does not appear in the
CC printed specification but has been retrieved from Genbank.

PT New combination comprising cDNAs that are differentially expressed in
PT prostate cancer, useful for diagnosing, treating or monitoring the
PT progression of treatment of prostate cancer.
XX

PS Claim 1; SEQ ID NO 398; 42pp; English.
XX
CC The invention relates to a combination comprising a number of cDNAs
CC expressed in prostate cancer. The invention also relates to a method for
CC detecting differential expression of one or more cDNAs in a sample
CC containing nucleic acids by hybridising a substrate with the nucleic
CC acids, thus forming one or more hybridisation complexes, detecting
CC hybridisation complex formation and comparing the complexes formed with
CC standard complexes, where differences between the standard and the sample
CC complex formation indicate differential expression of cDNAs in the
CC sample. The differential expression is diagnostic of prostate cancer. The
CC invention also relates to proteins and antibodies related to the cDNAs.
CC The combination is useful for diagnosing, treating or monitoring the
CC progression of treatment of prostate cancer. The antibodies are useful
CC for detecting prostate cancer. This sequence represents a human prostate
CC cancer cDNA of the invention.

PT   Novel isolated nucleic acid molecule associated with cancerous state of
PT   prostate cells and correlating with presence of prostate cancer, useful
PT   for detecting presence of prostate cancer, stage of prostate cancer.
XX
PS   Claim 1; Page 3027; 11750pp; English.
XX
CC   The invention relates to an isolated nucleic acid molecule (I) comprising
CC   a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the
CC   specification or its complement. (I) is useful for: (a) assessing whether
CC   a patient is afflicted with prostate cancer; (b) monitoring the
CC   progression of prostate cancer in a patient; (c) assessing the efficacy
CC   of a test compound to inhibit prostate cancer in a patient; (d) assessing
CC   the efficacy of a therapy for inhibiting prostate cancer in a patient;
CC   (e) selecting a composition for inhibiting prostate cancer in a patient;
CC   (f) assessing the prostate cell carcinogenic potential of a compound; (g)
CC   determining whether prostate cancer has metastasized in a patient; (h)
CC   assessing the aggressiveness or indolence of prostate cancer in a patient
CC   ; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker

XX
PT Isolation of polynucleotides from mycobacterial genomes, useful for
PT detection of Mycobacteria and for combating tuberculosis.
XX
PS Claim 23; Page 50; 161pp; English.
XX
CC The present invention describes a method for isolating a polynucleotide
CC of interest that is present or is expressed in a genome of a first
CC mycobacterium strain and that is absent or altered in a genome of a
CC second mycobacterium strain, which is different from the first strain
CC using a bacterial artificial chromosome (BAC) vector. Recombinant BAC
CC vectors, which are preferably immobilised, can be used to detect
CC mycobacterial nucleic acids (genomic DNA, cDNA or mRNA) in biological
CC samples. The polynucleotides identified are useful as probes or primers
CC for detecting a given mycobacterium of interest. By aligning the
CC polynucleotides contained in the recombinant BAC vectors it is possible
CC to physically map a polynucleotide of mycobacterial origin in a
CC biological sample. The methods and vectors from the present invention are
CC useful in providing information for combating tuberculosis. It is
CC possible to compare genomes between different strains or species and
CC their non-pathogenic strains or species counterparts. ABQ62492 to
CC ABQ63228 and ABB81227 to ABB81230 represent sequences used in the
CC exemplification of the present invention

PT New substantially purified nucleic acid molecule that encodes a cotton
PT protein or its fragment, useful as molecular tool for the targeting and
PT isolation of novel genes for plant protection and improvement.
XX
PS Claim 1; SEQ ID NO 4376; 30pp; English.
XX
CC The invention relates to a substantially purified nucleic acid molecule
CC that encodes a cotton protein or its fragment comprising an EST
CC (expressed sequence tag) appearing as ADP90990-ADP95919. Also included
CC are a substantially purified cotton protein or its fragment encoded by a
CC nucleic acid molecule above and a transformed plant (having a nucleic
CC acid molecule which comprises: an exogenous promoter region which
CC functions in a plant cell to cause the production of a mRNA molecule; a
CC structural nucleic acid molecule comprising one of the ESTs or their
CC complements; a 3' non-translated sequence that functions in the plant
CC cell to cause termination of transcription and addition of polyadenylated
CC ribonucleotides to a 3' end of the mRNA molecule). The ESTs are useful as
CC molecular tool for the targeting and isolation of novel genes for plant
CC protection and improvement. The ESTs are useful for developing new
CC strategies for understanding critical plant developmental and metabolic
CC pathways, for isolating genes and promoters, for identifying and mapping
CC the genes involved in developmental and metabolic pathways, and for
CC determining gene function. The cotton nucleic acid molecules are useful
CC as molecular tags to isolate genetic regions, isolate genes, map genes,
CC and determine gene function. The nucleic acid molecules are useful for
CC determining if genes are members of a particular gene family and for use
CC in marker-assisted breeding programs. The present sequence is one of the
CC 4930 cotton ESTs of the invention. NOTE: The sequences are not displayed
CC in the specification but are available in electronic format from the
CC USPTO at seqdata.uspto.gov/sequence.html?DocID=20040123338.

XX
PT New cardiovascular system related polynucleotides and polypeptides,
PT useful for diagnosing, treating and/or preventing disorders of the
PT cardiovascular system.
XX
PS Claim 1; SEQ ID NO 187; 674pp; English.
XX
CC Sequences AAS35126-AAS35740 represent cDNA molecules, which encode the
CC cardiovascular system antigen polypeptides of the invention.
CC Cardiovascular system antigens and their associated polynucleotides are
CC useful in the diagnosis, treatment and prevention of various types of
CC disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs,
CC chickens or sheep. A pathological condition can be determined by
CC detecting the presence or absence of a mutation in a cardiovascular
CC system antigen polynucleotide. The treatable disorders include autoimmune
CC diseases such as rheumatoid arthritis, hyperproliferative disorders such
CC as neoplasms of the breast or liver, cardiovascular disorders such as
CC cardiac arrest, cerebrovascular disorders such as cerebral ischaemia,
CC nervous system disorders such as Alzheimer's disease, infections caused
CC by bacteria, viruses and fungi, ocular disorders such as corneal
CC infection, endocrine disorders such as premature labour and infertility,
CC gastrointestinal disorders such as Crohn's disease, renal disorders such
CC as glomerulonephritis and respiratory disorders such as asthma and
CC pleurisy. The polypeptides can also be used to aid wound healing, to
CC prevent skin aging due to sunburn, to maintain organs before
CC transplantation, to regenerate tissues and in chemotaxis. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT New cardiovascular system related polynucleotides and polypeptides,
PT useful for preventing, treating, or ameliorating a medical condition,
PT such as cancer of cardiovascular tissues and cancer metastases.
XX
PS Claim 1; SEQ ID NO 187; 262pp; English.
XX
CC The invention relates to human cardiovascular system related polypeptides
CC and the polynucleotides encoding them. The polypeptides, polynucleotides
CC and antibodies to the polypeptides are useful for diagnosing a
CC pathological condition or a susceptibility to a pathological condition,
CC for preventing, treating, or ameliorating a medical condition, such as
CC cancer of cardiovascular system tissues, proliferative disorders, foetal
CC and developmental abnormalities, haematopoietic disorders, diseases of
CC the immune system, AIDS, autoimmune diseases (e.g., rheumatoid
CC arthritis), inflammation, allergies, neurological disorders (e.g.,
CC Alzheimer's disease, Parkinson's disease), cognitive disorders,
CC schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis,
CC diabetes, atherosclerosis, cardiovascular disorders, angiogenic
CC disorders, kidney disorders, gastrointestinal disorders, pregnancy-
CC related disorders, endocrine disorders and infections. The nucleic acids
CC are also useful for chromosome identification, radiation hybrid mapping
CC or long-range restriction mapping. The polypeptides and polynucleotides
CC may also be used as food additives or preservatives to increase or
CC decrease storage capabilities, fat content or other nutritional
CC components. This sequence represents a human cardiovascular system
CC related polynucleotide of the invention.

XX
PS Claim 1; SEQ ID NO 187; 262pp; English.
XX
CC The invention relates to an isolated nucleic acid molecule encoding a
CC human cardiovascular system associated polypeptide (or antigens), or its
CC fragment. Also included recombinant vectors, recombinant host cells, an
CC isolated human cardiovascular system associated polypeptide (including
CC its fragment, allelic variant, species homologue or epitope), an isolated
CC antibody that binds specifically to a human cardiovascular system
CC associated polypeptide, diagnosing a pathological condition or
CC susceptibility to a pathological condition (comprising determining the
CC presence or absence of a mutation in human cardiovascular system
CC associated nucleic acid and diagnosing a condition based on the presence
CC or absence of the mutation), identifying a binding partner to human
CC cardiovascular system associated polypeptides, the gene corresponding to
CC the human cardiovascular system associated cDNA sequence and identifying
CC an activity in a biological assay comprising expressing the human
CC cardiovascular system associated cDNA in a cell, isolating the
CC supernatant, detecting an activity in a biological assay and identifying
CC the protein in the supernatant having the activity. The human
CC cardiovascular system associated nucleic acids and polypeptides are used
CC to prevent, treat or ameliorate a medical condition (for example in
CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep), for
CC example autoimmune diseases such as rheumatoid arthritis,
CC hyperproliferative disorders, for example neoplasms of the breast or

PT Map of wheat D genome comprising the genome location of a microsatellite
PT marker, useful for e.g. identifying genes responsible for a desired
PT phenotypic trait, especially quantitative trait loci in wheat, and
PT diseases.
XX
PS Claim 1; Page 31; 105pp; English.
XX
CC The invention relates to a map of the bread wheat D genome comprising the
CC genome location of a microsatellite marker selected from a group of 185
CC such markers (ABQ92733-ABQ92917). The invention also encompasses the use
CC of left (ABQ92918-ABQ93102) and right (ABQ93103-ABQ93287) primers to
CC amplify and detect the microsatellite markers, and to identify genes
CC responsible for a phenotypic trait of interest in wheat. Wheat is an
CC allohexaploid species consisting of 3 diploid genomes designated A, B and
CC D, resulting from two successive intercrossings involving at least three
CC different species. The D genome is thought to have been introduced in the
CC most recent intercrossing, between the amphiploid AABB and Triticum
CC tauschii (DD), probably involving only a limited number of genotypes of
CC both species. Due to its polyploid genome, the large size of its genome,
CC and its low level of polymorphism, the genetic mapping of wheat has to
CC date been difficult. Microsatellites are tandemly repeated sequences
CC between one and six nucleotides long, and are very polymorphic in length,
CC mainly due to polymerase slippage during replication. This high degree of
CC polymorphism makes them especially suitable for the genetic mapping of
CC species which show little intraspecies polymorphism, such as wheat. In
CC addition, microsatellites are codominant, and exhibit Mendelian
CC inheritance. The 185 microsatellite markers of the invention are
CC developed from the ancestral diploid donor species Triticum tauschii and
CC map to the wheat D genome, which is less polymorphic than the A or B
CC genomes. These microsatellite markers thus help to overcome some of the
CC problems associated with the genetic mapping of wheat. The wheat D genome
CC map and the microsatellite markers and associated primers of the
CC invention are useful for identifying genes responsible for a phenotypic
CC trait of interest, most notably QTLs (quantitative trait loci). In
CC particular they may be used for analysing genes and alleles implicated in
CC disease and for identifying development factors, quality factors and
CC factors conferring resistance to pathogens and xenobiotics. The
CC microsatellite markers, and associated primers may be also be used in
CC mapping and genotyping diploid and polyploid species of Triticum,
CC particularly Aegilops, Triticum monococcum, Triticum durum, Triticum
CC aestivum, or related species; for identifying cultivars and hybrids of
CC Triticum and related species; to assess whether or not a product
CC comprises wheat or a related species; and to assess whether or not a
CC product comprises genetically modified wheat. The present sequence
CC represents a specifically claimed Triticum tauschii/wheat genome D
CC microsatellite marker of the invention. (Updated on 29-AUG-2003 to

PT   New polynucleotide sequences obtained from various cDNA libraries, useful
PT   as hybridization probes, as oligomers for PCR, for chromosome and gene
PT   mapping, in the recombinant production of protein, or in generating
PT   antisense DNA or RNA.
XX
PS   Claim 1; SEQ ID NO 26126; 44pp; English.
XX
CC   The invention relates to an isolated polynucleotide comprising any one of
CC   38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC   determined by the technique of SBH (sequencing by hybridisation). Also
CC   included is a purified polypeptide comprising a sequence corresponding to
CC   a reading frame of the novel polynucleotide. The nucleic acid sequences
CC   are useful in diagnostics as expressed sequence tags (EST) for
CC   identifying expressed genes or for physical mapping of the human genome,
CC   in forensics, in assessing biodiversities, or in identifying mutations
CC   responsible for genetic disorders and other traits. The nucleotide
CC   sequences are also useful as hybridisation probes, as oligomers for PCR,
CC   for chromosome and gene mapping, in the recombinant production of
CC   protein, or in generating antisense DNA or RNA. The purified polypeptide
CC   is useful for generating antibodies specific for it. The present sequence
CC   is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030073623

XX
CC   The invention relates to 9672 polynucleotides (ACL53866-ACL63537) which
CC   are differentially expressed in colon cancer cells. The invention also
CC   relates to vectors and host cells comprising a differentially expressed
CC   polynucleotide of the invention; a method for detecting a cancerous cell
CC   by detection of a gene product of the polynucleotides; a method for
CC   inhibiting a cancerous phenotype of a cell by inhibiting a gene product
CC   of the polynucleotides; a method of treating an individual with cancer by
CC   administration of a modulator of a gene product of the polynucleotides;
CC   and an isolated antibody that specifically binds to a polypeptide encoded
CC   by one of the 9672 polynucleotides. The polynucleotides, polypeptides,
CC   antibodies, and methods are useful for the detection of cancerous cells;
CC   for the diagnosis, prognosis and management of cancer; for the
CC   identification of agents that modulate the phenotype of cancerous cells;
CC   for the identification of therapeutic targets for cancer chemotherapy;
CC   and for the treatment of cancer, especially colon cancer and metastasized
CC   colon cancer, but also breast or pancreatic cancer. The polynucleotides
CC   are also useful as a source of probes or primers for use in diagnostic
CC   methods. The differentially expressed polynucleotides or their encoded
```

CC proteins can additionally be used as vaccines to modulate primary immune
CC responses for the prevention or treatment of cancer. The present sequence
CC represents a specifically claimed polynucleotide which is differentially
CC expressed in colon cancer. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT Monitoring differential expression of several genes in first Bacillus
PT cell relative to expression of same genes in one or more second Bacillus
PT cells, by using substrate containing Bacillus genomic sequenced tag
PT array.
XX
PS Claim 11; SEQ ID NO 4903; 200pp; English.
XX
CC The invention describes a method of monitoring differential expression of
CC genes in a first Bacillus cell relative to expression of the genes in
CC other Bacillus cells, comprising hybridising labelled nucleic acid probes
CC isolated from Bacillus cells to a substrate containing array of Bacillus
CC genomic sequenced tags (GST), examining the array, and determining
CC relative gene expression by an observed hybridisation reporter signal of
CC a spot in the array. The method is useful for measuring the expression of
CC genes in a first Bacillus cell relative to expression of the same genes
CC in one or more second Bacillus cells. The method is useful for monitoring
CC global expression of several genes from a Bacillus cell, discovering new
CC genes, identifying possible functions of unknown open reading frames and
CC monitoring gene copy number variation and stability. Monitoring changes
CC in expression of genes may be used to provide a representation of the way
CC in which Bacillus cells adapt to changes in culture conditions,

CC environmental stress or other physiological provocation. Extensive follow
CC -up characterisation is unnecessary, when one spot on an array equals one
CC gene or one open reading frame, since sequence information is available.
CC This sequence represents a genomic sequence tag (GST) used in the method
CC of the invention. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New nucleic acid comprising a sequence encoding an Enterococcus fecalis
PT polypeptide, useful for preparing a composition for diagnosing or
PT treating E. fecalis infection.
XX
PS Disclosure; SEQ ID NO 5; 193pp; English.
XX
CC The invention relates to Enterococcus faecalis polynucleotides and
CC polypeptides. The invention also relates to a recombinant expression
CC vector comprising a polynucleotide operably linked to a transcription
CC regulatory element, a cell comprising a recombinant vector, a method for
CC producing an E. faecalis polypeptide, an isolated nucleic acid comprising
CC a sequence not given in the specification, a recombinant vector
CC comprising the nucleic acid and a cell comprising the recombinant vector.
CC The polynucleotides can be used to detect the presence of E. faecalis in
CC a sample. The sequences are useful for preparing a composition for
CC diagnosing or treating Enterococcus faecalis infection. This sequence
CC represents an E. faecalis polynucleotide of the invention.

PT   New polynucleotide encoding plant aminoacyl-tRNA synthase and the encoded
PT   polypeptide, useful e.g. for regulating gene expression.
XX
PS   Claim 12; Page 53; 74pp; English.
XX
CC   The present sequence is a partial coding sequence for soybean glutamyl-
CC   tRNA synthetase. Glutamyl-tRNA synthetase is an aminoacyl-tRNA synthetase
CC   (AARS). AARSs charge (acylate) specific tRNAs with amino acids for use in
CC   protein synthesis. Glutamyl-tRNA synthetase therefore charges a glutamyl-
CC   tRNA with glutamate. Since this enzyme has a crucial role in protein
CC   synthesis and therefore life, any agent that inhibits or disrupts protein
CC   synthesis is likely to be toxic. The present sequence could therefore be
CC   used as a basis for testing whether the encoded aminoacyl-tRNA synthetase
CC   is sensitive to known inhibitors or other chemicals and hence could be
CC   used in the discovery of potential herbicides

PT   toxic response genes to a reference gene expression profile indicative of
PT   toxicity.
XX
PS   Claim 1; Page 147; 455pp; English.
XX
CC   The present invention describes a method (M1) for determining a
CC   toxicological response to an agent, which comprises comparing the
CC   expression profile of one or more human toxic response genes to a
CC   reference gene expression profile indicative of toxicity, and so
CC   determining the presence of a toxic response to the agent. Also
CC   described: (1) an array comprising one or more polynucleotides selected
CC   from the genes corresponding to the partial sequences given in ABZ82842
CC   to ABZ84764, or their fragments of at least 20 nucleotides, or homologues
CC   ; and (2) determining if a gene putatively identified to be a toxic
CC   response gene plays a role on toxic response pathways by determining the
CC   expression profile of the gene after exposure of cells or a human subject
CC   to a known toxic pharmaceutical or industrial agent, comprising: (a)
CC   exposing cells to an agent or isolating cells from a human subject who
CC   was exposed to an agent; (b) obtaining the test gene expression profile
CC   for a putatively identified toxic response gene after exposure to a known
CC   toxic pharmaceutical or industrial agent; and (c) comparing the test
CC   profile to the expression profile of a gene with a similar function or
CC   comparing the test profile to the expression profile of that gene after
CC   exposure to other known toxic compounds. The methods are useful for
```

CC predicting and determining toxicological responses on a cellular, organ
CC or system level. The arrays comprising the human genes are useful for
CC toxicological screening of drugs, pharmaceutical compounds and chemicals

PT isolate candidate molecules for rational drug discovery programs.
XX
PS Claim 14; SEQ ID NO 36977; 1766pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target

```
CC   prokaryotic essential genes. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in

PS   Claim 1; SEQ ID NO 4100; 7273pp; English.
XX
CC   The invention relates to human tumour-associated antigenic target (TAT)
CC   polypeptides, and their related nucleic acids. The TAT polypeptides are
CC   overexpressed in cancer tissues compared to normal tissues, and may thus
CC   serve as effective targets for the diagnosis and treatment of cancer in
CC   mammals. The invention also relates to nucleic acid and polypeptide
CC   sequences at least 80% identical to the TAT nucleic acids and
CC   polypeptides; expression vectors and host cells comprising a TAT nucleic
CC   acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC   molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC   TAT polypeptide; and methods and compositions for the treatment or
CC   diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC   antibodies, antagonists, binding molecules and compositions are useful
CC   for diagnosing or treating a cell proliferative disorder associated with
CC   increased TAT expression, particularly cancers such as breast cancer,
CC   colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC   cancer, pancreatic cancer, cervical cancer, cancers of the central
CC   nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC   used as hybridisation probes, in chromosome and gene mapping, in
CC   chromosome identification and in gene therapy. The present sequence
CC   represents a TAT nucleic acid of the invention

PT Screening for anti-neoplastic agent involves exposing cells to a chemical
PT agent to be tested for anti-neoplastic activity, and determining a change
PT in expression of a gene of a signature gene set.
XX
PS Claim 1; SEQ ID NO 707; 44pp; English.
XX
CC The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
CC tumour

PT Diagnosing and detecting the progression of liver cancer, hepatocellular
PT carcinoma or metastatic liver tumor in a patient, involves detecting the
PT level of expression of two or more genes in a liver tissue sample.
XX
PS Claim 1; SEQ ID NO 2269; 298pp; English.
XX
CC The invention relates to a novel method for diagnosing and detecting the
CC progression of liver cancer, hepatocellular carcinoma or metastatic liver
CC tumour in a patient, and differentiating metastatic liver cancer from
CC hepatocellular carcinoma in a patient, involving detecting the level of
CC expression of two or more genes represented in ABN93503-ABN97455 in a
CC tissue sample. The method of the invention has hepatotropic, and
CC cytostatic activity. The method is useful for diagnosing and detecting
CC the progression of liver cancer, hepatocellular carcinoma and metastatic
CC liver carcinoma in a patient. The method is useful for identifying
CC expression profiles which serve as useful diagnostic markers as well as
CC markers that can be used to monitor disease states, disease progression,
CC drug toxicity, drug efficacy and drug metabolism. Note: The sequence data

CC The invention relates to 2175 novel human ovarian antigens (ABP41054-
CC ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also
CC encompasses polypeptides 90% identical and polynucleotides 95% identical
CC to the sequences of the invention. The invention additionally relates to
CC recombinant vectors and host cells comprising human ovarian antigen
CC polynucleotides, antibodies against human ovarian antigens, and the use
CC of ovarian antigen polynucleotides and polypeptides in diagnosing,
CC treating, prognosing or preventing various ovary and/or breast-related
CC disorders. Such conditions include ovarian cancer and breast cancer, and
CC metastatic tumours of ovarian or breast origin, reproductive system
CC disorders (e.g., infertility, disorders of pregnancy, anovulation,
CC polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine
CC disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic
CC shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and
CC vaginitis), immune disorders (e.g., congenital and acquired
CC immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),
CC blood-related disorders (e.g., anaemia), cardiovascular disorders,
CC respiratory disorders, neurological disorders, gastrointestinal disorders
CC and urinary system disorders. Ovarian antigen polypeptides and
CC polynucleotides may also be used in screening for compounds which
CC modulate ovarian antigen expression or activity. The polynucleotides may
CC further be used for gene therapy, chromosome mapping, in the
CC identification of individuals and in forensic analysis, and the
CC polypeptides may be used as food additives or to prepare antibodies
CC useful in disease diagnosis, drug targeting and phenotyping. The present
CC sequence represents cDNA encoding a human ovarian antigen of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT Screening test compounds that reduce and/or prevent obesity involves
PT contacting cell expressing gene from alpha-two-glycoprotein.
XX
PS Claim 1; SEQ ID NO 5; 21pp; English.
XX
CC The invention relates to a novel method for screening for test compounds
CC that reduce and/or prevent obesity. The method comprises contacting a
CC cell expressing a gene selected from SEQ ID NO. 1-12 or 25-85, with a
CC compound. The method of the invention demonstrates anorectic applications
CC and may be useful for screening for compounds that reduce and/or prevent
CC obesity. The current sequence is that of the human creatine kinase, brain
CC (CKB) DNA of the invention. The sequence listing for the specification
CC can be located via the USPTO web-site.

PT rejection, in an individual, comprises detecting the expression level of
PT the genes.
XX
PS Claim 80; SEQ ID NO 463; 1762pp; English.
XX
CC The present invention relates to diagnosing or monitoring transplant
CC rejection, e.g. cardiac or kidney transplant rejection, in an individual
CC comprises detecting the expression level of one or more genes. The
CC methods, system and kits are useful in diagnosing or monitoring
CC transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic
CC islet, lung, bone marrow or stem cell transplant rejection,
CC xenotransplant rejection or mechanical organ replacement rejection, in an
CC individual. The method is also useful in assessing the immune status of
CC an individual. The methods are also useful in diagnosing and monitoring
CC diseases that involve the immune system, e.g. rheumatoid arthritis,
CC lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or
CC viral, bacterial or fungal infection. The present sequence represents a
CC mRNA reference sequence for a 50 mer oligonucleotide marker for diagnosis
CC and monitoring of allograft rejection and other disorders.

PS Claim 1; SEQ ID NO 271; 237pp; English.
XX
CC This invention relates to the novel association of protein sequences (and
CC the genes which encode them) to the NF-kappaB pathway. The invention may
CC be useful for the production of compounds with an antiinflammatory,
CC cytostatic, hepatotropic, virucide, antiarthritic, antirheumatic,
CC gastrointestinal-Gen, antiasthmatic, antiarteriosclerotic,
CC immunomodulator, cerebroprotective, vasotropic, immunosuppressive or
CC vulnerary activity or for gene therapy. The proteins and nucleotides are
CC useful for diagnosing, preventing, treating, or ameliorating conditions
CC or diseases associated with the NF-kappaB pathway. The condition is an
CC immune disorder, an inflammatory disorder, an inflammatory disorder
CC related to aberrant NF-kappaB regulation, cancer, aberrant apoptosis,
CC hepatic disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM
CC syndromes, hypohidrotic ectodermal dysplasia, X-linked anhidrotic
CC ectodermal dysplasia, immunodeficiency, viral infections, HIV-1, HTLV-1,
CC hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell

PT Biomarkers useful for predicting or determining the response of a mammal
PT to a cancer treatment comprising administration of a modulator of cyclin-
PT dependent kinase activity.
XX
PS Claim 5; SEQ ID NO 2378; 141pp; English.
XX
CC This invention describes a novel method of predicting or determining
CC whether a mammal will respond or is responding to an anti-cancer agent
CC that modulates cyclin-dependent kinase (cdk) activity. The method
CC comprises measuring the level of one or more biomarkers selected from
CC 2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC invention is utilized in a kit for determining or predicting whether
CC patient would be susceptible or resistant to treatment by an agent
CC modulating cdk activity. The invention also describes a method for
CC utilizing individualized genetic profiles for treating diseases and
CC disorders based on patient's response and molecular level, specialized
CC microarrays comprising the biomarkers described, antibodies directed
CC against the biomarkers and a cell culture model to identify biomarkers.
CC The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
CC oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC tartaric acid salt. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC sequence encodes a biomarker used in the method of the invention.

PT Prognosis of neuroblastoma, based on measuring expression of one or more
PT specific target genes, for example insulin-like growth factor binding
PT protein-7, that are differentially expressed between patients with good
PT and poor prognosis.
XX
PS Claim 1; SEQ ID NO 33; 104pp; French.
XX
CC The invention describes a method for prognosis of neuroblastoma
CC comprising: extracting a biological material from a patient sample;
CC contacting the material with at least one reagent (R) specific for any of
CC 37 target genes (TG) of, e.g. 2667, 762 and 580 base pairs in length (SEQ
CC ID NOs: 1-37) fully defined in the specification, provided that when the
CC gene is any of SEQ ID NOs: 11, 17 or 37, then at least two (R), specific
CC for different TG are used; and determining expression of at least one TG
CC (or at least two for SEQ ID NOs: 11, 17 and 37). The method provides a
CC very reliable differentiation between patients with good or poor
CC prognoses. This sequence represents a neoblastoma prognosis method target
CC gene.

PT Detecting expression of one or more nucleic acid sequences in biological
PT sample, useful for detecting cancer, comprises detecting a change in the
PT expression level of one or more nucleic acid sequences relative to a
PT control expression level.
XX
PS Claim 1; SEQ ID NO 82; 256pp; English.
XX
CC The invention relates to detecting differential expression of one or more
CC nucleic acid sequences (appearing as AEA04356-AEA04448 in a biological
CC sample comprising obtaining the sample from a subject, and detecting a
CC change in the expression level of one or more nucleic acid sequences
CC relative to a control expression level of the nucleic acid sequences, is
CC new. Also included are detecting cancer (or a pre-malignant condition
CC thereof) in a subject (comprising comparing the expression level of one
CC or more nucleic acid sequences in a biological sample from the subject
CC with a control expression level of the nucleic acid sequences, where a
CC change of at least two-fold in the expression level of the nucleic acid
CC sequences is indicative of cancer or pre-malignant condition), monitoring
CC the onset (or progression, or regression) of cancer (or a pre-malignant
CC condition) in a subject (by detecting in a biological sample of the
CC subject at a first point in time the expression of one or more nucleic
CC acid sequences, repeating the first step at a subsequent point in time
CC and comparing the expression level detected, where a change in the
CC expression level is indicative of progression of cancer or its pre-
CC malignant condition in the subject), determining prognosis for cancer or
CC its pre-malignant condition in a subject (comprising detecting in a
CC biological sample of the subject, the expression level of one or more
CC nucleic acid sequences, comparing the expression level with a reference
CC expression level of the nucleic acid sequences and evaluating the
CC prognosis of the subject based on the comparison), determining the
CC efficacy of a test compound for inhibiting cancer in a subject,
CC determining the efficacy of a therapy for inhibiting cancer in a subject,
CC selecting a composition for inhibiting cancer in a subject, inhibiting
CC cancer in a subject, a polypeptide encoded by the nucleic acids above
CC (appearing as AEA04449-AEA04541), an antibody that specifically binds to
CC the polypeptide sequence, and detecting in a biological sample the
CC presence of a polypeptide. The method is useful for detecting
CC differential expression of one or more nucleic acid sequences in a
CC biological sample, which is useful for detecting cancer (especially colon
CC cancer), monitoring the onset, progression, or regression of cancer or a
CC pre-malignant condition, or determining prognosis for cancer or its pre-
CC malignant condition in a subject, or for determining the efficacy of a
CC test compound for inhibiting cancer in a subject. The compound is useful
CC for inhibiting cancer in a subject. The antibodies may also be used to
CC treat cancer. The present sequence is a cDNA from a human gene under-
CC expressed in cancer samples.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

             Computational Analysis of Full-Length Mouse cDNAs Compared with
            Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
             Normalization and subtraction of cap-trapper-selected cDNAs to
            prepare full-length cDNA libraries for rapid discovery of new
```

genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by Dr. John Todd (Dept. of Medical Genetics Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome Trust/MRC building Addenbrookes Hospital Cambridge) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

                     /lab_host="DH10B"
                     /clone_lib="Blackshear/Soares normalized Xenopus egg
                     library"
                     /note="Vector: pT7T3-Pac; Site_1: EcoRI; Site_2: NotI;
                     PolyA-selected mRNA was prepared from unfertilized Xenopus
                     laevis eggs.  The library was constructed in the vector
                     pT7T3-Pac as described in Bonaldo, M.F., Lennon, G. and
                     Soares, M.B. 'Normalization and subtraction:  two
                     approaches to facilitate gene discovery',  Genome Research
                     6:791-806, 1996.  The first strand synthesis used a
                     NotI-dT18 primer; double stranded cDNAs were ligated to
                     EcoRI adapters, digested with NotI, and directionally
                     cloned into the NotI and EcoRI-digested pT7T3-Pac vector.
                     The library contained approximately 7.2 X 10^5
                     recombinants, with average insert sizes of 1-1.5 kb."

PT New type-1 ribosome-inactivating protein bouganin - useful in forming
PT immunotoxins for use in medicine and plant protection.
XX
PS Example 8; Page 24; 39pp; English.
XX
CC This sequence represents a fragment of the DNA encoding the ribosome-
CC inactivating protein (RIP) of the invention. The RIP is designated
CC bouganin, and comprises a linear polypeptide (26 kDa) with a pI of 9.0,
CC where the amino-terminal end exhibits 50 % homology with the sequence
CC shown in AAW67752. The proteins and conjugates form compositions in
CC treating various human diseases or conditions, including cancer, graft-
CC versus-host disease, organ transplant rejection, type I diabetes,
CC multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus,
CC and myasthenia gravis. The proteins are also useful as therapeutic anti-
CC viral agents in plants and mammals. Compositions containing the
CC polynucleotide encoding bouganin are useful in gene therapy. Bouganin
CC possesses low non-specific toxicity, which makes it very suitable for use
CC as the toxic agent in various immunotoxins. (Updated on 27-AUG-2003 to
CC correct OS field.)

CC   Two partially degenerate primers (AAQ42302 and AAQ42303) were synthesised
CC   based on the amino acid sequence of the first 27 amino acids of momordin
CC   II (Experimentia, 36: 524-527 (1991)). The resulting 81bp PCR product
CC   amplified from M.balsamina cDNA was cloned in pUC18 and one of the
CC   candidate clones (pMO110) which was sequenced was identified as encoding
CC   the N-terminal 27 amino acids of momordin II. A hybridisation probe
CC   (AAQ42304) was designed for screening the momordin II cDNA library based
CC   on the sequence of pMO110. The full-length Momordin II coding sequence
CC   was isolated i.e. AAQ42307. (Updated on 25-MAR-2003 to correct PN field.)

CC   AAQ76184 encodes AAR63905 the type I ribosome-inactivating protein (RIP)
CC   momordin II, one of the nine RIPs described in AAR63903-R63911. RIPs are
CC   key components of cytotoxic therapeutic agents (CTAs), which include gene
CC   fusion products and immunoconjugates. CTAs may be used to selectively
CC   eliminate any cell type to which a RIP component is targetted, by the
CC   specific binding capacity of the second component of the agent. They can
CC   be used in the treatment of diseases where the elimination of a
CC   particular cell type is desired, such as autoimmune disease, cancer and
CC   graft-versus-host disease. (Updated on 25-MAR-2003 to correct PN field.)

XX
PT   Protein isolated from Mirabilis Jalapa - is Mirabilis antiviral protein
PT   variant, acts as an immuno-toxin in treating viral infections.
XX
PS   Claim 2; Fig 1; 35pp; English.
XX
CC   The synthetic MAP gene was constructed from eight synthetic oligomer
CC   blocks which were synthesised based on sequences obtd. from a MAP protein
CC   isolated from Mirabilis jalapa. The two Cys codons were replaced with Ser
CC   codons. The gene was then ligated into an E. coli expression vector with
CC   appropriate control sequences and the OmpA signal for secretion of the
CC   MAP protein. MAP is a ribosome inactivating protein and is toxic. This
CC   toxicity can be used to develop immunotoxins having high selectivity by
CC   linking the protein to various antibodies. The native protein however has
CC   only 1/30 th of the toxicity of the ricin A chain. The protein encoded by
CC   the synthetic gene shown is designated MAP-H and has a disulphide bond
CC   removed. This results in an analogue with greater protein synthesis
CC   inhibitory activity and hence greater toxicity than native MAP. (Updated
CC   on 25-MAR-2003 to correct PN field.)

PT   New ribosome inactivating protein bryodin-2 and related conjugates - for
PT   killing target cells, e.g. in treatment of cancer, also related nucleic
PT   acid, vectors and transformed cells.
XX
PS   Claim 21; Page 54-55; 81pp; English.
XX
CC   The sequence encodes the ribosome inactivating protein termed bryodin-2,
CC   isolated from Bryonia dioica. Conjugates of the protein with a ligand may
CC   be used to kill target cells (i.e. those to which the ligand component
CC   binds specifically) or to inhibit proliferation of tumour cells. Typical
CC   applications include the treatment of cancer, viral infections, malaria,
CC   trypanosomiasis, inflammatory or autoimmune diseases, including in vitro
CC   purging of e.g. bone marrow. (Updated on 25-MAR-2003 to correct PN
CC   field.)

CC   A synthetic alpha-trichosanthin gene was constructed to facilitate
CC   mutational analysis of alpha-TCS in experiments to investigate structure-
CC   function relationships. The synthetic gene contains unique restriction
CC   sites spaced 20-90bp apart. The translation product of the synthetic gene
CC   corresponds to the mature alpha-TCS. Variants of the protein can be
CC   generated by mutagenesis of the synthetic gene. The variants can then be
CC   screened for changes in ribosome inhibitory and/or HIV-1 inhibitory
CC   activities. See AAQ26499-Q26505. (Updated on 25-MAR-2003 to correct PF
CC   field.) (Updated on 25-MAR-2003 to correct PR field.)

XX
CC   The present invention describes a trichosanthin mutant which is prepared
CC   through the mutational deformation of the trichosanthin gene and using an
CC   expression system. The trichosanthin gene is isolated from Trichosanthes
CC   kirilowii (Mongolian snake-gourd). The trichosanthin mutant has several
CC   advantages including high bioactivity, high selectivity to target, and
CC   strong kill action to cancer cells, virus and HIV. It can also be used
CC   for metaphase induced labour. The present sequence represents the
CC   nucleotide sequence of wild type trichosanthin which is given in the
CC   exemplification of the present invention

PT   Mutant trichosanthin protein of low antigenicity useful for treating
PT   tumor e.g. leukemia, comprises a sequence of native trichosanthin with
PT   modification of at least one amino acid residue in three specific
PT   regions.
XX
PS   Example 1; Fig 1; 42pp; English.
XX
CC   The invention relates to a mutant trichosanthin (MTCS) protein of low
CC   antigenicity comprising a sequence of native TCS with the modification of
CC   at least one amino acid residue in three regions which is 174-180, 203-
CC   227 and 230-244 and substantially retaining the biological activities of
CC   the native TCS. The MTCS protein, its fragment or derivative is useful as
CC   an therapeutic agent; or for preparing a medicament for treating viral
CC   disease e.g. acquired immunodeficiency syndrome (AIDS), tumour e.g.
CC   leukemia, for inducing abortion and/or treating ectopic pregnancy. The
CC   present sequence represents the native TCS encoding cDNA

PT   New highly soluble expressed trichosanthin mutant for curing tumor,
PT   acquired immunodeficiency syndrome, gravidity outside of womb and
PT   inducing labor in midpregnancy.
XX
PS   Disclosure; Fig 1; 20pp; Chinese.
XX
CC   The invention relates to a trichosanthin mutant with capability of high
CC   dissolubility. The drug in this method can cure tumor, acquired
CC   immunodeficiency syndrome (AIDS), gravidity outside of womb and induction
CC   of labor in midpregnancy, is highly active and low mammalian toxicity.
CC   The present sequence represents a trichosanthin mutant associated DNA.

PT   New recombinant plant viral nucleic acid - capable of systemic infection
PT   and stable expression of non-native nucleic acid in plant host.
XX
PS   Example 4; Col 45-48; 44pp; English.
XX
CC   The alpha-trichosanthin gene may be inserted into a recombinant plant
CC   virus which can then be used to infect plants for the production of non-
CC   native products (in this case alpha- trichosanthin). Other genes which
```

```
CC   may be inserted into the virus are those which control a phenotypic
CC   trait, such as male sterility, or sequences encoding anti-sense RNA which
CC   can be useful to prevent the expression of undesired phenotypic traits.
CC   The recombinant virus is derived from a plus sense, single stranded virus
CC   selected from tobamovirus, brome mosic virus, rice necrosis virus or a
CC   gemini virus. (Updated on 25-MAR-2003 to correct PF field.) (Updated on
CC   27-AUG-2003 to correct OS field.)

PS   Example 4; Page 124-125; 149pp; English.
XX
CC   A DNA sequence (AAT47094) codes for Chinese cucumber alpha- trichosanthin
CC   (AAW10468), a ribosome inactivating protein of potential use in the
CC   treatment of HIV infection. Expression vector pBCG152 was constructed in
CC   which the alpha-trichosanthin coding sequence was placed under control of
CC   the promoter of the tobacco mosaic virus-U1 coat protein gene, which had
CC   been deleted. The viral nucleic acid was capable of self-replication,
CC   encapsidation and systemic spread in infected Nicotiana benthamiana
CC   plants, and directed the high-level expression of biologically active
CC   alpha- trichosanthin in plant tissues. (Updated on 17-OCT-2003 to
CC   standardise OS field)

PT Recombinant viral DNA for altering plant phenotype or protein prodn -
PT contains non-native sub-genomic promoter for expression of heterologous
PT protein and native promoter for expression of coat protein.
XX
PS Example 4; Col 45-46; 42pp; English.
XX
CC The sequences given in AAT61374-77 encode heterologous proteins which
CC were used in the recombinant viruses of the invention. The viruses are
CC recombinant plant viruses which comprise a native plant virus subgenomic
CC promoter, at least one non-native plant virus subgenomic promoter, and a
CC sequence encoding a plant virus coat protein. These heterologous
CC sequences are preferably under the control of the native promoter
CC sequence. By using a plant virus existing cells can be altered with a new
CC coding sequences without involving germ cell. The recombinant viruses are
CC stable and can cause systemic infection, with stable
CC expression/transcription in plants that are hosts for the non-native part
CC of the vector. These sequences are preferably integrated in plant viruses
CC having either the O-coat protein or the U1-coat protein gene. (Updated on
CC 25-MAR-2003 to correct PF field.) (Updated on 25-MAR-2003 to correct PR
CC field.) (Updated on 27-AUG-2003 to correct OS field.)

PT   Recombinant plant viral nucleic acid derived from a plus sense, single
PT   stranded RNA plant virus - useful for the transcription of products in a
PT   host.
XX
PS   Example 4; Col 43-46; 46pp; English.
XX
CC   The invention relates to a recombinant plant viral nucleic acid derived
CC   from a plus sense, single stranded RNA plant virus. The recombinant plant
CC   viral nucleic acid comprises: (a) a first plant viral subgenomic promoter
CC   that is native to the plus sense, single stranded RNA plant virus and
CC   operably joined to a first nucleic acid expression sequence; and (b) a
CC   second plant viral subgenomic promoter that is non-native and is operably
CC   joined to a second nucleic acid expression sequence; where, (i) (a) and
CC   (b) are incapable of recombination with one another, (ii) either the
CC   first or the second nucleic acid expression sequence is a plant viral
CC   coat protein coding sequence. The recombinant plant viral nucleic acid
CC   allows the transcription of products in a host, such as therapeutic and
CC   other useful polypeptides or proteins e.g. enzymes, complex biomolecules
CC   and ribozymes. It also gives the option of applying the coding sequence
CC   to the desired organism, tissue, organ or cell, is stable for the foreign
CC   coding sequences and is capable of systemic infection in the plant host.
CC   The transformation and regeneration of target organisms become
CC   unnecessary. (Updated on 20-MAR-2003 to correct PR field.)

XX
CC   The present sequence encodes chinese cucumber alpha-trichosanthin. The
CC   nucleic acid sequence can be expressed in the plant viral constructs of
```

```
CC   the invention. The specification describes a recombinant plant viral
CC   nucleic acid derived from a positive (+)-sense RNA plant virus comprising
CC   a native (+)-sense RNA plant virus promoter that is linked to an
CC   expression sequence and a heterologous (+)-sense RNA plant virus promoter
CC   that is linked to an expression sequence. The promoters are incapable of
CC   recombination with each other, and one of the expression sequences
CC   encodes a plant viral coat protein while the other is optionally a
CC   heterologous coding sequence. The plant viral nucleic acid is capable of
CC   systemic infection in a host plant. The viral construct is useful for the
CC   introduction and expression of non-viral foreign genes in plants and the
CC   production of e.g. potential AIDS therapeutic drugs. (Updated on 27-AUG-
CC   2003 to correct OS field.)

PT   Recombinant non-retroviral nucleic acid for producing proteins such as
PT   interleukins, melanin and vaccines, comprises subgenomic promoters linked
PT   to sequences coding for viral coat protein and heterologous proteins.
XX
PS   Example 4; Col 57-60; 51pp; English.
XX
CC   This invention describes a novel recombinant viral nucleic acid (I) from
CC   a non-retroviral (+) sense, single stranded animal RNA virus comprising a
CC   nucleic acid sequence coding for a viral coat protein regulated by a
CC   native subgenomic promoter and other two heterologous nucleic acid
CC   sequences regulated by two other subgenomic promoters. (I) is useful for
CC   expressing foreign genes e.g. genes inducing male sterility in plants.
CC   (I) is also useful for producing proteins such as interleukins, EPO
CC   (erythropoietin), CSF (colony stimulating factor), Factor VIII, hGH
CC   (human growth hormone), melanin, insulin, vaccines etc., and enzymes that
CC   are useful for stereo specific catalysis of organic compounds. (I) is
CC   stable and transcribed systemically. The dual subgenomic promoter system
CC   reduces the frequency of recombination thus reducing regeneration of the
CC   wild type virus. This sequence encodes a chinese cucumber alpha-
CC   trichosanthin protein which is described in the method of the invention.

PT   New recombinant viral RNA molecules, useful in modifying a plant host
PT   cell, genotypically or phenotypically, e.g. male sterility or improved
PT   resistance to pests or diseases, or for producing pharmaceuticals,
PT   hormones or antibodies.
XX
PS   Example 4; SEQ ID NO 3; 50pp; English.
XX
CC   The invention relates to an RNA molecule (RVNA) comprising a cis-acting
CC   replication element from a positive strand RNA plant virus capable of
CC   replication in a plant cell and comprising an exogenous RNA segment
CC   capable of expressing its function in a host cell. The exogenous RNA
CC   segment is located in a region of the RNA molecule able to tolerate the
CC   segment without disrupting RNA replication in the absence of a trans-
CC   acting replication element in the host cell. Also included are a capped
CC   RNA molecule capable of infecting a host plant cell (where the capped RNA
CC   molecule: (a) comprises a cis-acting replication element derived from a
CC   positive strand RNA plant virus, has no extraneous non-viral sequences
CC   between the cap site and the 5' terminus of the viral sequence, and
CC   further comprises an exogenous RNA segment capable of expressing its
CC   function in a host cell in a region of the capped RNA molecule able to
CC   tolerate the segment without disrupting RNA replication of the capped RNA
CC   molecule in the absence of a trans-acting replication element in the host
CC   cell; or (b) has no extraneous non-viral sequences between the cap site
CC   and the 5' terminus of the viral sequence, and where the capped RNA
CC   molecule comprises the entire genome of the positive strand RNA virus,
CC   such as luteovirus, potexvirus, potyvirus, tombusvirus, tymovirus and
CC   tobamovirus, carmovirus, or sobemovirus, and an exogenous RNA segment
CC   capable of expressing its function in a host cell, where the exogenous
CC   RNA segment inserted into the genome of the positive strand RNA virus at
CC   a gene site consisting of a coat gene site, a movement protein gene site,
CC   or another gene site under the control of a subgenomic promoter, which is
CC   one of at least two subgenomic promoters present in the virus), a DNA
CC   transcription vector comprising cDNA having one strand complementary to
CC   the (capped) RNA molecule cited above and methods of modifying a host
CC   cell, genotypically or phenotypically (comprising introducing into the
CC   cell the (capped) RNA molecule cited above, where the exogenous RNA
CC   segment confers a detectable trait in the host cell which modifies the
CC   host cell). The cis-acting replication element is derived from a
CC   monopartite plant virus, tobamovirus, or tobacco mosaic virus. The
CC   (capped) RNA molecules and DNA transcription vectors are useful in
CC   modifying a host cell, genotypically or phenotypically, e.g. improved
CC   tolerance to herbicides, extremes of heat or cold, drought or osmotic
CC   stress, improved resistance to pests or diseases, male or female
CC   sterility, or improved yield. The RNA molecules are also useful for
CC   transcription or expression of foreign genes in the host to produce the
CC   desired product, such as pharmaceuticals, hormones, antibiotics,
CC   pigments, or antibodies. The present sequence is the Chinese cucumber
CC   alpha-trichosanthin cDNA, which was used as the exogenous RNA in an RVNA
CC   of the invention.

PT   New recombinant viral nucleic acid derived from an animal virus having a
PT   native subgenomic promoter, useful in production of products such as
PT   interleukins, enzymes, and hormones.
XX
PS   Example 4; SEQ ID NO 3; 49pp; English.
XX
CC   The invention describes a recombinant viral nucleic acid derived from an
CC   animal virus possessing a native subgenomic promoter. The recombinant
CC   viral nucleic acid comprises: a first viral sub genomic promoter; a first
CC   nucleic acid sequence that codes for a viral coat protein whose
CC   transcription is regulated by the first viral subgenomic promoter; a
CC   second viral sub genomic promoter; and a second nucleic acid sequence
CC   whose transcription is regulated by the second viral sub genomic
CC   promoter, where the first and second viral subgenomic promoters possess
CC   different nucleic acid sequences relative to each other, and the second
CC   nucleic acid sequence is upstream to the first nucleic acid sequence.
CC   Also described are: a non-human host animal infected by a viral vector
CC   comprising the recombinant viral nucleic acid; and a process for
CC   transcribing a nucleic acid sequence in a non-human host animal. The
CC   recombinant viral nucleic acid is useful in sustained systemic
CC   transcription of nucleotide sequences within host cells and in producing
CC   gene products, e.g. IL-1-12, EPO, G-CSF, GM-CSF, M-CSF, Factor VIII,
CC   Factor IX, tissue plasminogen activator, human growth hormone, receptors,
CC   receptor antagonists, antibodies, neuro-polypeptides, melanin, lipase,
CC   hormones, pharmaceuticals, antibiotics, vaccines and insulin within a
CC   host animal. This sequence encodes chinese cucumber alpha-trichosanthin
CC   that can be incorporated into the recombinant viral protein of the
CC   invention.

PT   Recombinant tri:chosanthin protein - with selective inhibitory effect on
PT   viral expression in HIV infected T-cells or monocyte-macrophase.
XX
PS   Claim 2; Page 59; 102pp; English.
XX
CC   Genomic DNA was isolated from T.kirilowii leaves from Korea and a library
CC   was constructed. Clone pQ21D was identified as likely to contain a TCS-
CC   encoding sequence in its 4kb insert. The deduced amino acid sequence is
CC   identical to that of TCS purified from Cantonese T.kirilowii roots,
CC   except for 2 conservative substitu- tions. The isolated coding sequence
CC   can be used to produce TCS in pure form for use as a therapeutic agent.
CC   See also AAQ06344-Q06351

PT   Recombinant Trichosanthin protein prodn. in E. coli - for use in the
PT   selective inhibition of viral expression in HIV infected cells.
XX
PS   Disclosure; Fig 4; 37pp; English.
XX
CC   The TCS coding sequence was amplified using the primers of AAQ31828-30.
CC   The amplified prod. has the sequence of AAQ31827, which was used as a
CC   probe. One isolate, pQ21D, comprises the sequence of AAQ31826. The
CC   recombinant TCS sequence may be used in the recombinant prodn. of TCS.
CC   TCS can be used for the selective inhibition of viral expression in HIV-
CC   infected human T-cells or macrophages. (Updated on 25-MAR-2003 to correct
CC   PF field.)

PT   Nucleic acid encoding trichosanthin protein - which can be used to
PT   inactivate ribosome(s) to inhibit protein synthesis or to inhibit HIV
PT   expression.
XX
PS   Claim 1; Col 3; 53pp; English.
XX
CC   Trichosanthin protein was isolated from T.kirilowii root tuber and
CC   sequenced. The amino acid sequence was used to design sets of degenerate
CC   primers (see AAQ26506-8) for PCR amplification of the TCS coding
CC   sequence. The amplified product was used as a probe to isolate TCS coding
CC   sequence from T.kirilowii genomic libraries. One clone (pQ21D) contained
CC   a 4kb insert. The amino acid sequence deduced from the pQ21D insert
CC   differed from the purified TCS sequence at amino acids 211 and 224. The
CC   substitutions at each position were conservative and are postulated to
CC   indicate minor variations between strains; the purified TCS was obtained
CC   from the Canton region of China and the genomic DNA was obtained from
CC   T.kirilowii leaves from Korea. The claimed nucleic acid encodes at least
CC   the mature TCS and may further include the regions coding for the N- and
CC   C-terminal amino acid extensions or encodes TCS fused to a ligand peptide
CC   which confers cell-surface recognition properties on the fused protein.
CC   See also AAQ26500-Q26505. (Updated on 25-MAR-2003 to correct PF field.)
CC   (Updated on 25-MAR-2003 to correct PR field.)

PT   Obtaining protein toxins from tobacco cells useful as therapeutic agent,
PT   by transforming a cell suspension with a DNA construct comprising a
PT   signal sequence for the secretion of the proteins.
XX
PS   Example; Col 13-16; 19pp; English.
XX
CC   The present invention relates to obtaining secretable plant protein
CC   toxins from plant cells. The invention is useful for obtaining
CC   commercially useful and higher quantities of plant protein toxins. These
CC   proteins may be used as a therapeutic agent or cytotoxin directed against
CC   specific cancer cells by covalently linking the toxin to an antibody that
CC   recognizes a particular antigenic determinant associated with the cancer
CC   cell. The new method allows production of relatively large quantities of
CC   polypeptide toxins in a heterologous expression system, where the
CC   specific yield and concentration of the desired protein are markedly
CC   higher than those reporter in previous methods. (Updated on 06-AUG-2003
CC   to correct OS field.)

PT   Preparation of mistletoe lectins in heterologous systems, particularly
PT   for use as anticancer agents and immunostimulants.
XX
PS   Claim 19; Fig 5A; 78pp; German.
XX
CC   This invention describes a novel mistletoe lectin (I) and its fragments
CC   which have antitumour and immunostimulatory activity. The A-chain (MLA)
CC   of the mistletoe lectin binds to, and inactivates, the 28S subunit of
CC   ribosomes. Non-cytotoxic forms of (I) activate T-cell and lymphokine-
CC   producing macrophages, so stimulate immunity. (I) and its fragments are
CC   used to treat uncontrolled cell growth (particularly cancers) and if they
CC   lack cytotoxicity, to increase the strength of the immune response,
CC   particularly to a co-administered antigen (tumour-associated, bacterial
CC   or viral). The method allows production of mistletoe lectin, and its
CC   individual chains, in many different isoforms and on a large scale, at
CC   any time of the year. Recombinant products are free from toxins present
CC   in natural mistletoe extracts. This sequence encodes a fragment of a
CC   mistletoe lectin A1 protein variant

PT   Oligo:nucleotide encoding ribosome-inactivating bryodin 1 from Bryonia
PT   dioica - inhibits protein synthesis in vitro and is useful as ligand or
PT   toxin conjugates or fusion proteins to selectively kill, e.g. cancer
PT   cells.
XX
PS   Claim 2; Page 27-28; 46pp; English.
XX
CC   A full-length cDNA (AAT16208) codes for bryodin 1 (AAR92481), a ribosome-
CC   inactivating protein. The cDNA was obtd. following PCR amplification of
CC   cDNA derived from Bryonia dioica leaf, 3'RACE and 5'RACE (see also
CC   AAT16209-16). The cDNA can be incorporated into a vector and used for
CC   large-scale prodn. of recombinant bryodin 1 in transformed host cells.
CC   Fusion proteins including bryodin 1 may also be produced for use e.g. as
CC   immunotoxins

PT   Obtaining protein toxins from tobacco cells useful as therapeutic agent,
PT   by transforming a cell suspension with a DNA construct comprising a
PT   signal sequence for the secretion of the proteins.
XX
PS   Example; Col 29-32; 19pp; English.
XX
CC   The present invention relates to obtaining secretable plant protein
CC   toxins from plant cells. The invention is useful for obtaining
CC   commercially useful and higher quantities of plant protein toxins. These
CC   proteins may be used as a therapeutic agent or cytotoxin directed against
CC   specific cancer cells by covalently linking the toxin to an antibody that
CC   recognizes a particular antigenic determinant associated with the cancer
CC   cell. The new method allows production of relatively large quantities of
CC   polypeptide toxins in a heterologous expression system, where the
CC   specific yield and concentration of the desired protein are markedly
CC   higher than those reporter in previous methods. (Updated on 06-AUG-2003
CC   to correct OS field.)

PT   Nucleic acid encoding fusion protein containing mistletoe lectin A chain
PT   - useful for treatment of proliferative and autoimmune diseases,
PT   allergies and tumours.
XX
PS   Disclosure; Fig 11a'; 115pp; German.
XX
CC   This sequence encodes a variant mistletoe lectin A-chain, rMLA. This
CC   sequence can be used in the construction of a fusion protein which
CC   comprises an effector module that is cytotoxic intracellularly, a
CC   processing module covalently bonded to the effector module and containing
CC   a protease recognition sequence, and a targeting module covalently bonded
CC   to the processing module, able to bind specifically to the surface of a
CC   cell so as to mediate internalisation of the fusion protein. Such a
CC   fusion protein can be used for treating disorders involving proliferation
CC   and/or elevated activation of cells, especially autoimmune disease,
CC   allergy and tumours. The proteins can be administered e.g. by injection
CC   or topically but especially by intravenous injection, at 1 ng to 500 mu
CC   g/kg/day, or for ex vivo use at 1 pg to 500 ng/ml. Fusion proteins can
CC   develop toxic activity in a wide range of target cells. The processing
CC   module prevents extracellular dissociation, and fusion proteins based on
CC   mistletoe lectin A-chain are far more active than those based on ricin
CC   and do have the associated problems of non-specific toxicity. The protein
CC   may be expressed in a non-glycosylated form that does not bind to sugar
CC   receptors in the liver, and which has a long half-life in the blood.
CC   Where the mistletoe lectin B-chain is used, it actively assists in
CC   translocation of the ML A-chain from the endoplasmic reticulum to the
CC   cytoplasm

PT   Nucleic acid encoding pre:pro form of mistletoe lectin - for therapeutic
PT   or diagnostic use.
XX
PS   Claim 2; Fig 4A; 30pp; German.
XX
CC   Mistletoe lectin is a cytotoxic agent that has been used for tumour
CC   therapy. It can be used in immunotoxins and medicaments. Nucleic acid
CC   fragments can be used in diagnostic methods. Mistletoe lectin ( AAT91659)
CC   comprises an A chain (AAT91660) and a B chain (AAT91661)

PT   New transgenic plant expressing mistletoe lectin - useful for producing
PT   recombinant lectin in e.g. cancer diagnosis and therapy.
XX
PS   Claim 2; Fig 4a; 30pp; German.
XX
CC   This invention describes a novel transgenic plant transformed with a
CC   vector capable of encoding a mistletoe (Viscum album) lectin
CC   preproprotein or a biologically active fragment. The specification also
CC   describes a polypeptide produced by a plant where the polypeptide
CC   exhibits at least one enzymatic modification other than the glycosylation
CC   that occurs in Viscum album or the polypeptide is a fusion protein, a
CC   mistletoe lectin polypeptide dimer and an immunotoxin comprising the
CC   polypeptide or the polypeptide dimer. The plants are used for large-scale
CC   production of mistletoe lectin for diagnostic or therapeutic purposes
CC   (e.g. in cancer therapy). This sequence encodes the mistletoe lectin A-
CC   chain which is contained in expression vector pT7MLA. (Updated on 20-MAR-
CC   2003 to correct PF field.)

PT In vitro determination of response to mistletoe lectin, useful for
PT selecting tumor therapy, also anticancer agents that bind to the
PT mistletoe lectin receptor.
XX
PS Claim 8; Page 73-74; 83pp; German.
XX
CC The present invention relates to a method of determining the response of
CC a subject in vitro to misteltoe lectin, or its individual chains, by
CC specific quantitative and/or qualitative determination of membrane-bound
CC receptors that are characterised by a terminal N-acetylneuraminic acid
CC (Neu5Ac) bound to galactose (Gal) through a glycosidic alpha2-6 bond. The
CC method is useful for determining the response of a subject to misteltoe
CC lectin, in order to determine if the lectin is suitable for use as an
CC anticancer agent. Agents that recognise, or bind to, the mistletoe lectin
CC receptor are useful for diagnostic detection of the receptor, especially
CC on tumour cells, e.g. present in a biopsy sample or blood, and for
CC treatment of proliferative, viral (HIV or herpes), autoimmune or
CC neurological diseases. The present sequence is a coding sequence of
CC mistletoe lectin
